Welcome

After power you need DFT , scan cells, SE/SI/SO, stitch order, lockups, markers

The idea

- Toy tiny_dft: 4 SDFF cells, stitch_count=3, lockup f3→f4, 6 transform edges, 1 marker

Two tracks

- Implement track uses common/ solvers; browser lab track uses platform tools

Toy design

- Tiny_dft: 4 SDFF cells, stitch=3, lockup f3→f4, 6 edges, 1 marker

Path

- Scan flops → SE/SI/SO → stitch → order → lockup → transform → markers → chain view →

Begin

- Next: identify scan SDFF cells
