Why total

Signoff reports chip Ptot = sum of switching and leakage

The idea

- GOLDEN: chip_ptot=5.55

Chip Ptot

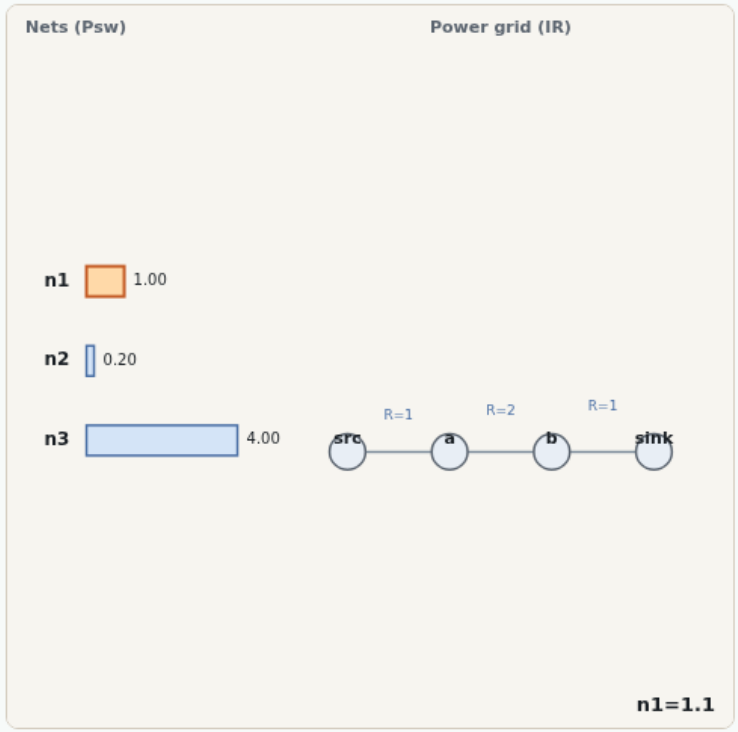

Chip Ptot

Net n1

TOTAL POWER

Net n1

Step 2 / 5 · n1 · module02-01-total-power

Explanation

n1: 1.0 + 0.1 = 1.1.

- n1

```
1.1
```

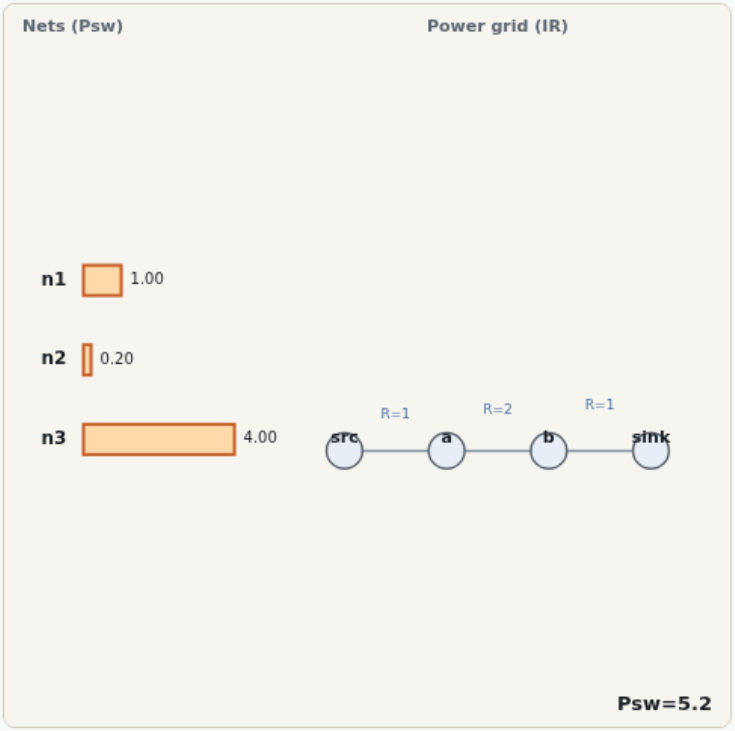

Net n1

Chip Psw

TOTAL POWER

Chip Psw

Step 3 / 5 · chip_sw · module02-01-total-power

Explanation

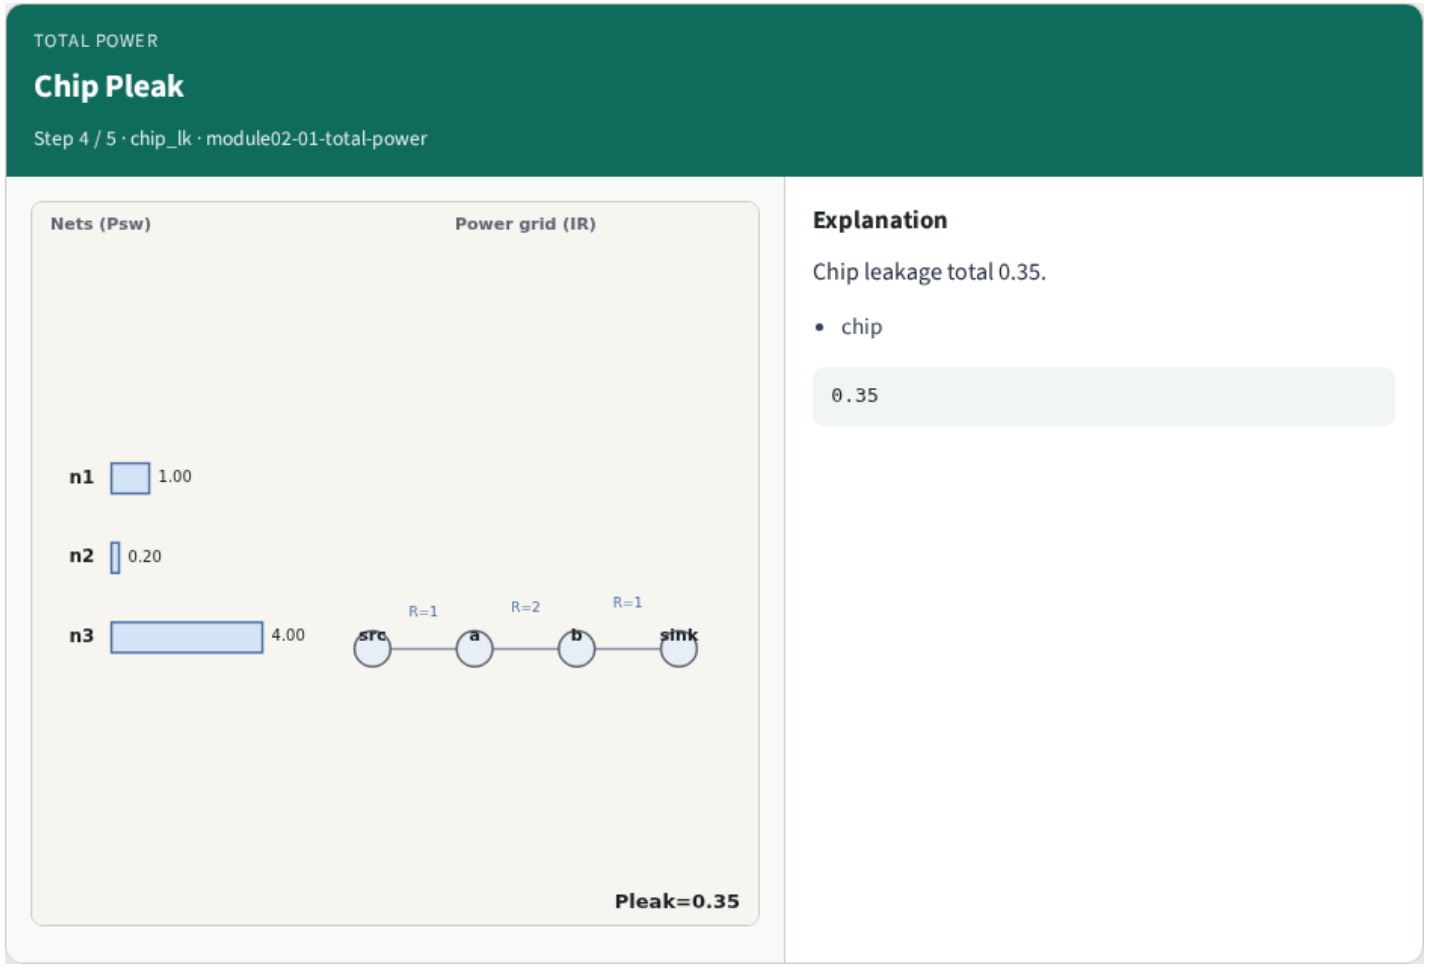

Chip switching total 5.2.

- chip

```
5.2
```

Chip Psw

Chip Pleak

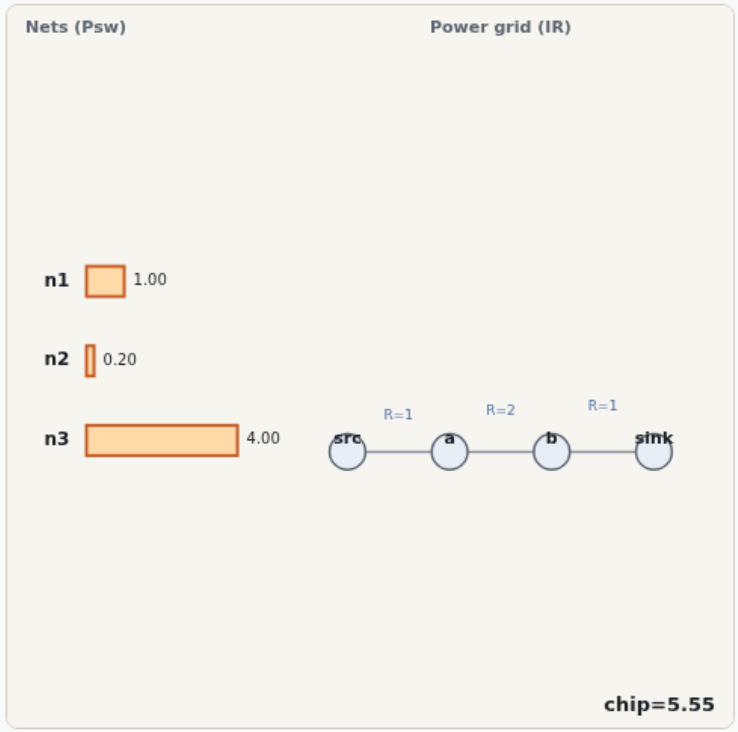

Chip Pleak

Golden

TOTAL POWER

Golden

Step 5 / 5 · golden · module02-01-total-power

Explanation

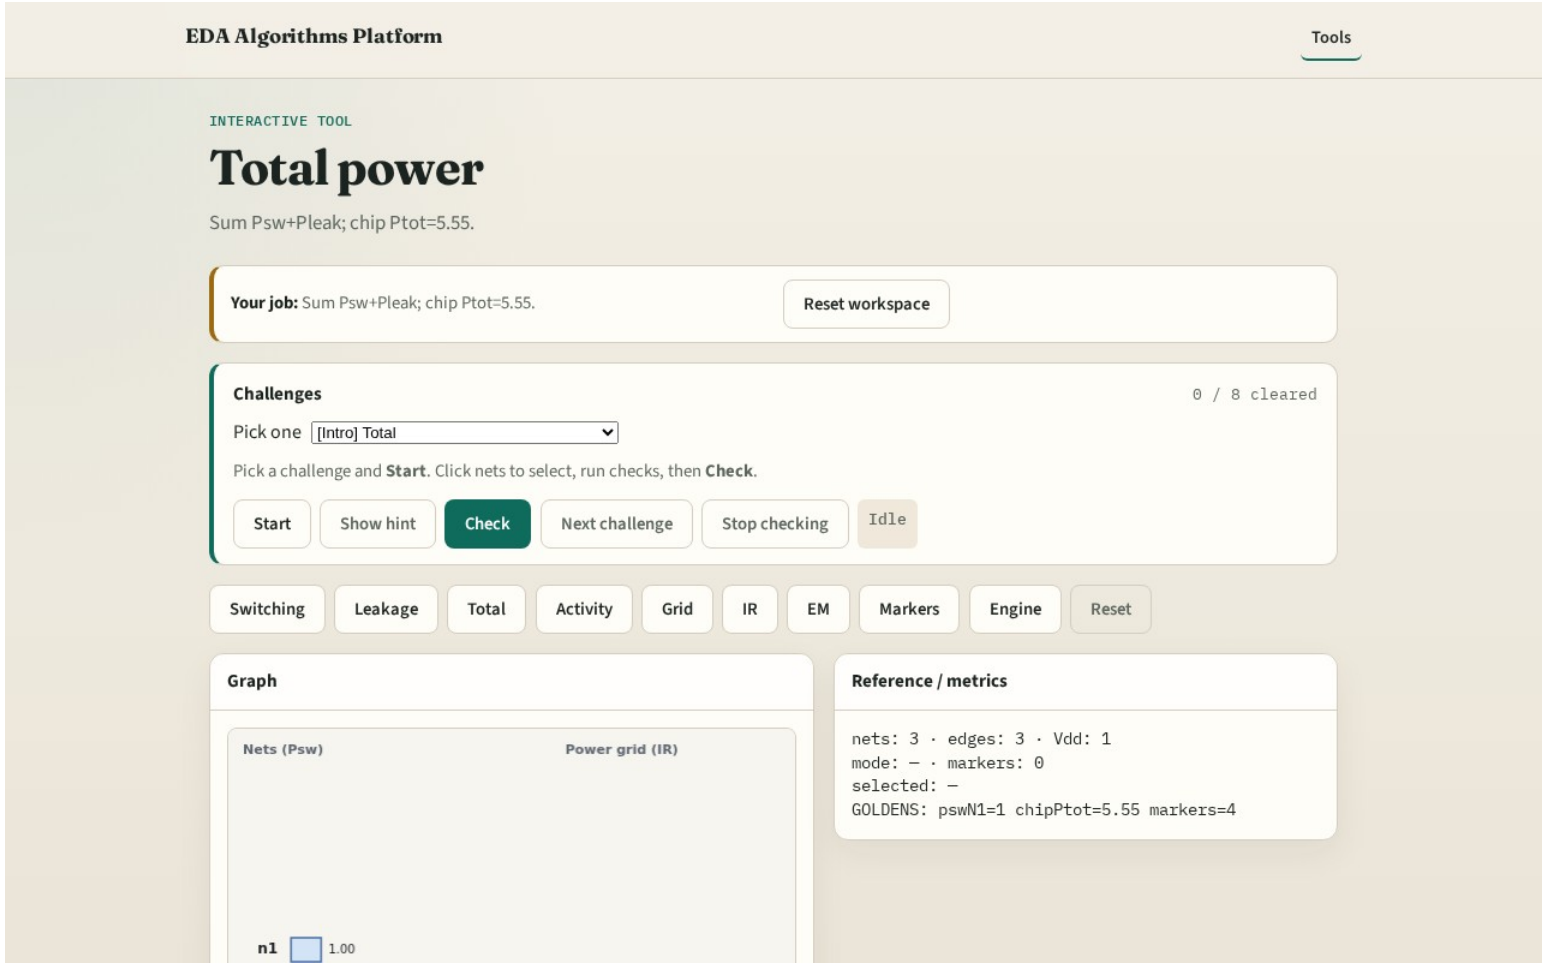

GOLDEN: chip_ptot=5.55.

- GOLDEN

```
5.55
```

Golden

Browser lab track

Browser lab starter

Implement track

- Call total_power(); assert total==5.55

Pitfalls

- Summing only one component
- Double-counting nets

Your turn

- Next: activity factors
