# Welcome

Learn_yosys has two parts

# Part A literacy

- Toy tiny_yosys

# Part B real Yosys

- Real path: `read_verilog` → `hierarchy` → `proc` → `flatten` → `opt` → `aigmap`/`synth` →
- Goldens come from Yosys logs

# Two tracks

- Implement track: `common/solvers.py` (toy) and `common/real_solvers.py` (evidence)
- Browser labs mirror both

# RTLIL

- Yosys IR is RTLIL , `$and`, `$dff`, later `$_AOI3_` / `$_DFF_P_` after synth
- You will read `stat` and `dump`

# Begin

- Start with the toy proc lab for pass names, then continue into the real CLI modules
