Why flatten

Flatten merges child hierarchy so later passes see one module

The idea

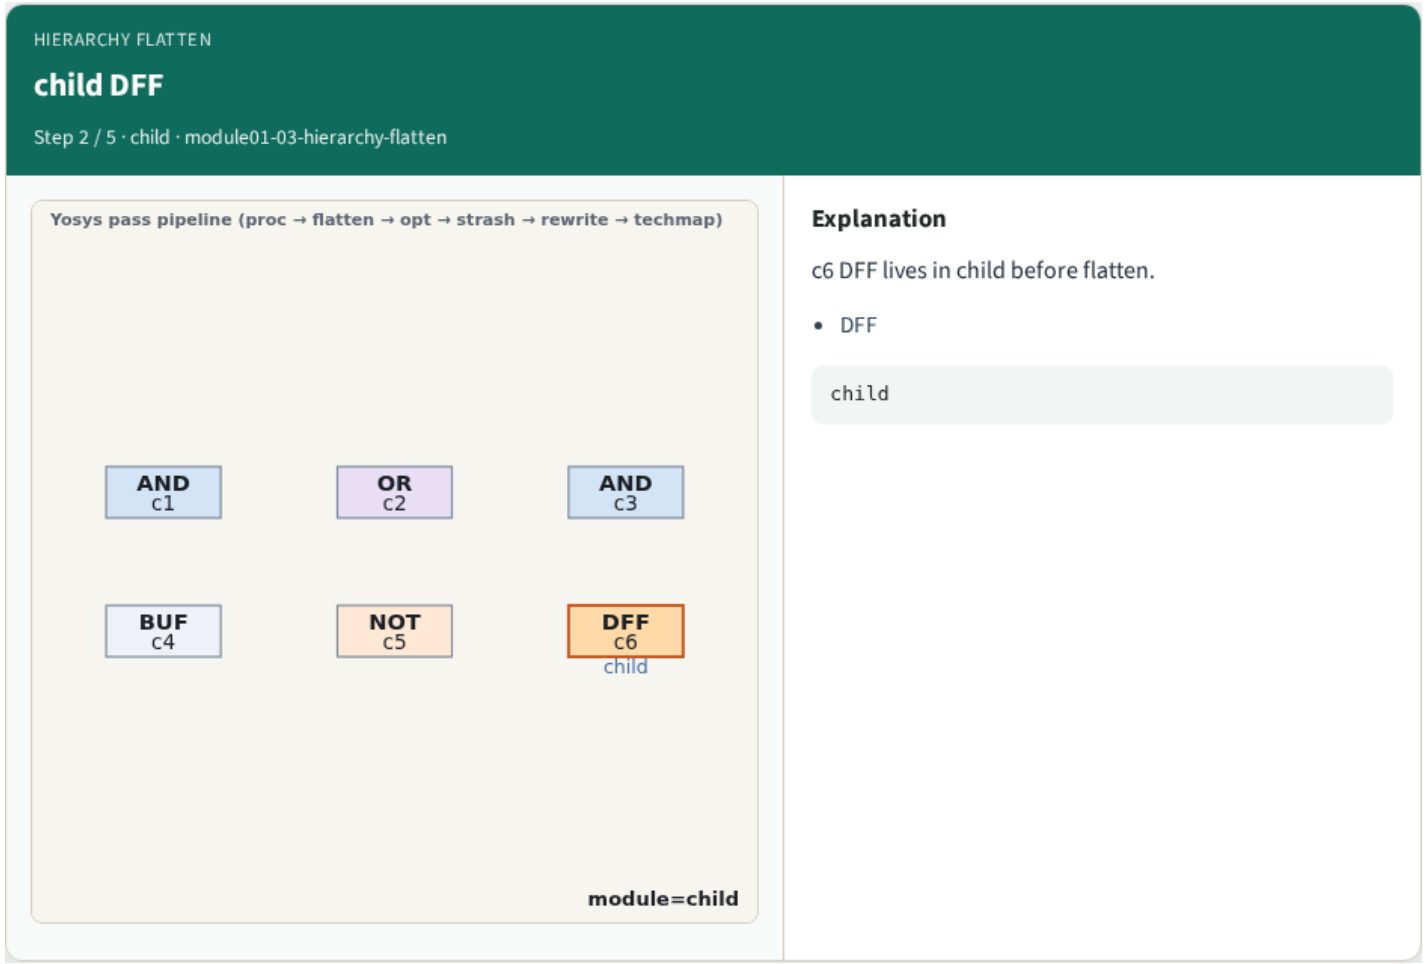

- GOLDEN: after_flatten_modules=1

Two modules

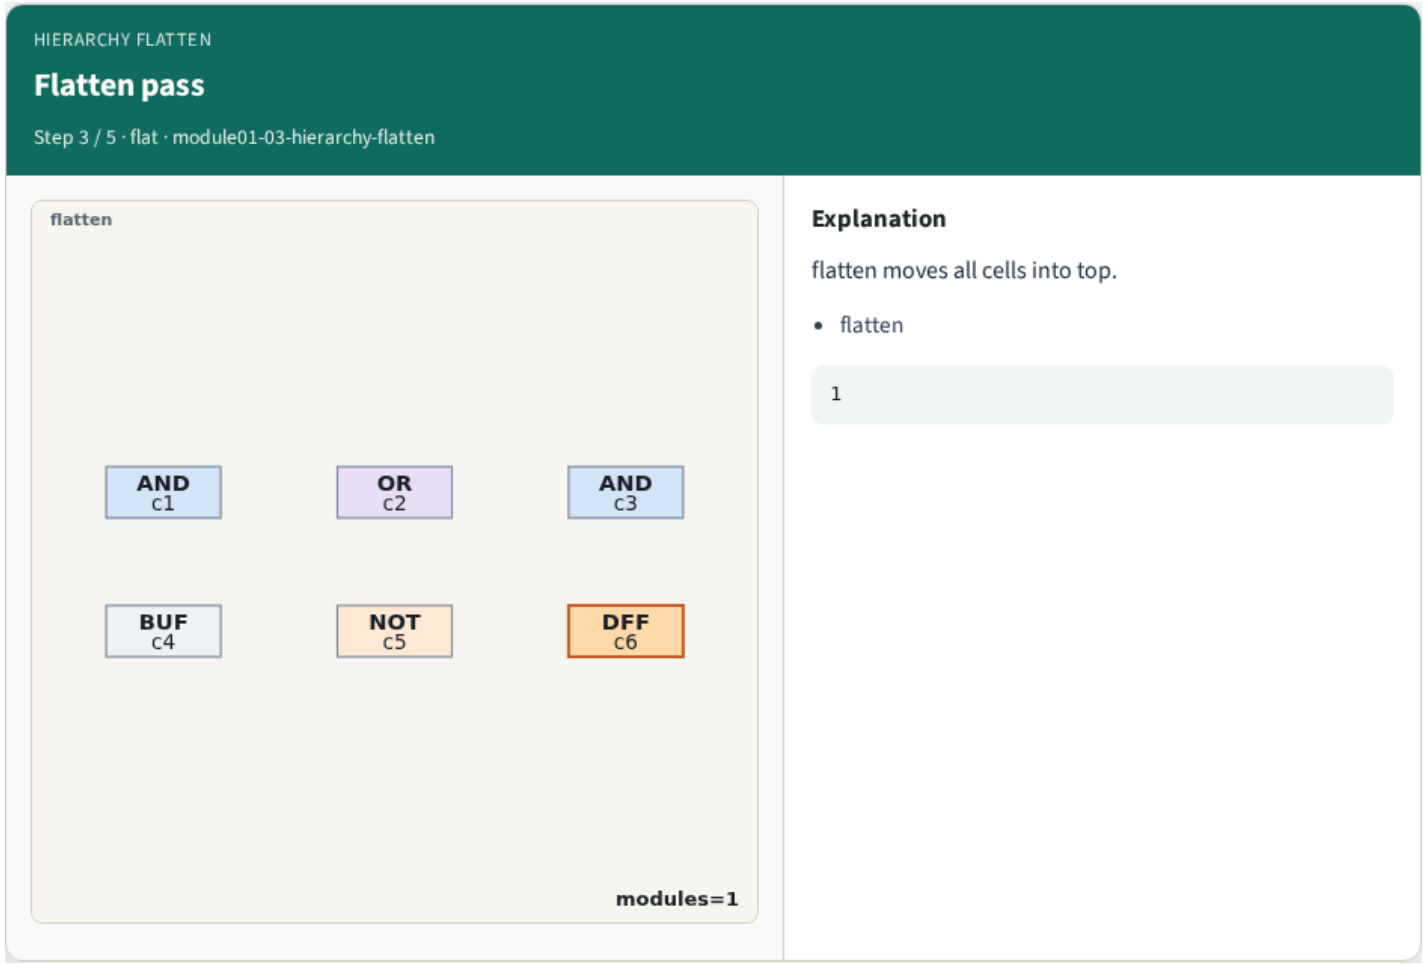

Two modules

child DFF

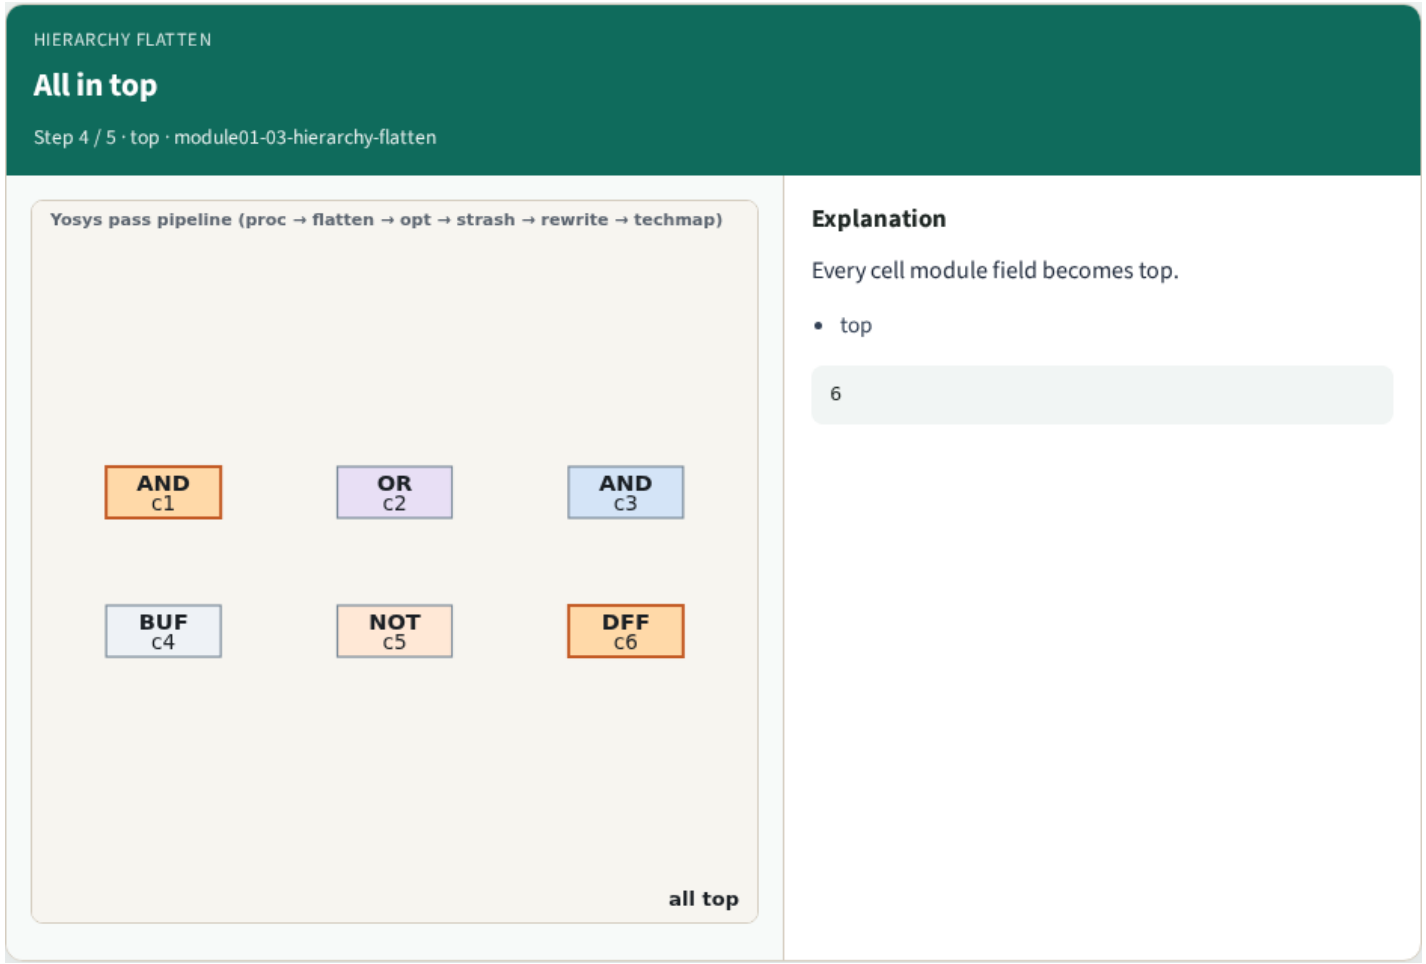

child DFF

Flatten pass

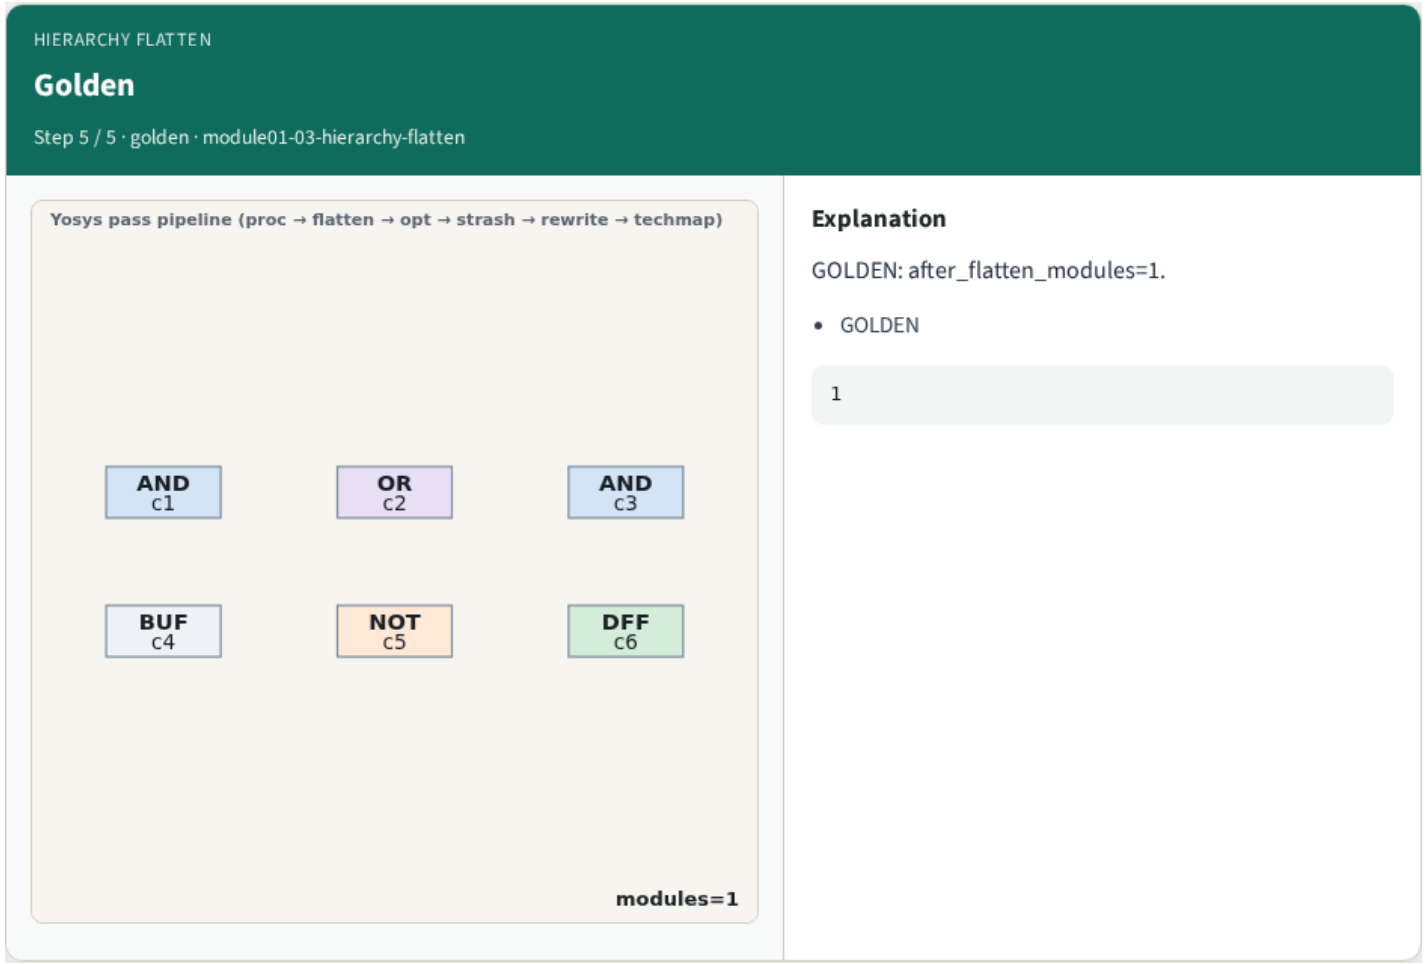

Flatten pass

All in top

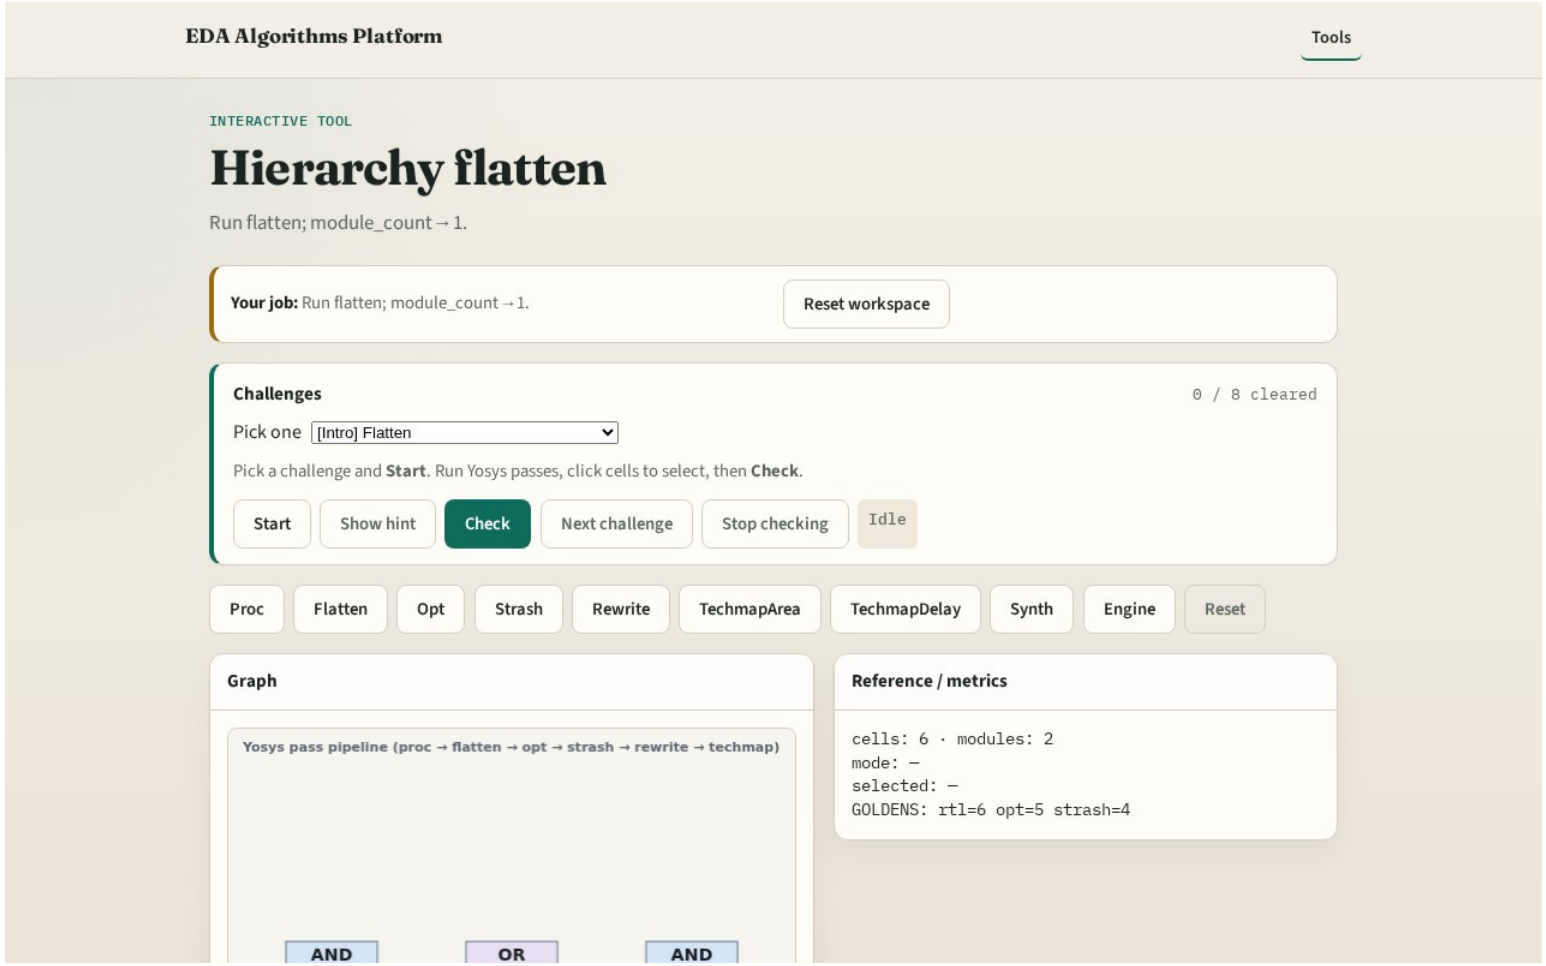

All in top

Browser lab track

Browser lab starter

Implement track

- Call pass_hierarchy_flatten(); assert module_count==1

Pitfalls

- Flattening before proc
- Forgetting DFF in child

Your turn

- Next: opt/DCE
