Min period

Search a small candidate set of retimings , not full WD/FEAS , and pick the smallest legal period

The idea

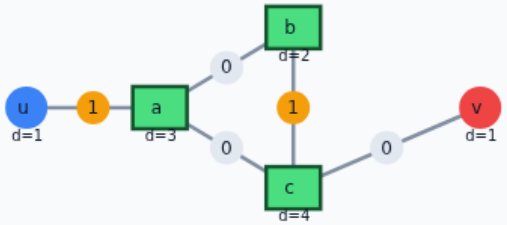

- Candidates include r=0, forward on a/b, backward on c; best is forward on a with period 5

Try candidates

MIN PERIOD

Try candidates

Step 1 / 5 · search · module03-03-min-period

Explanation

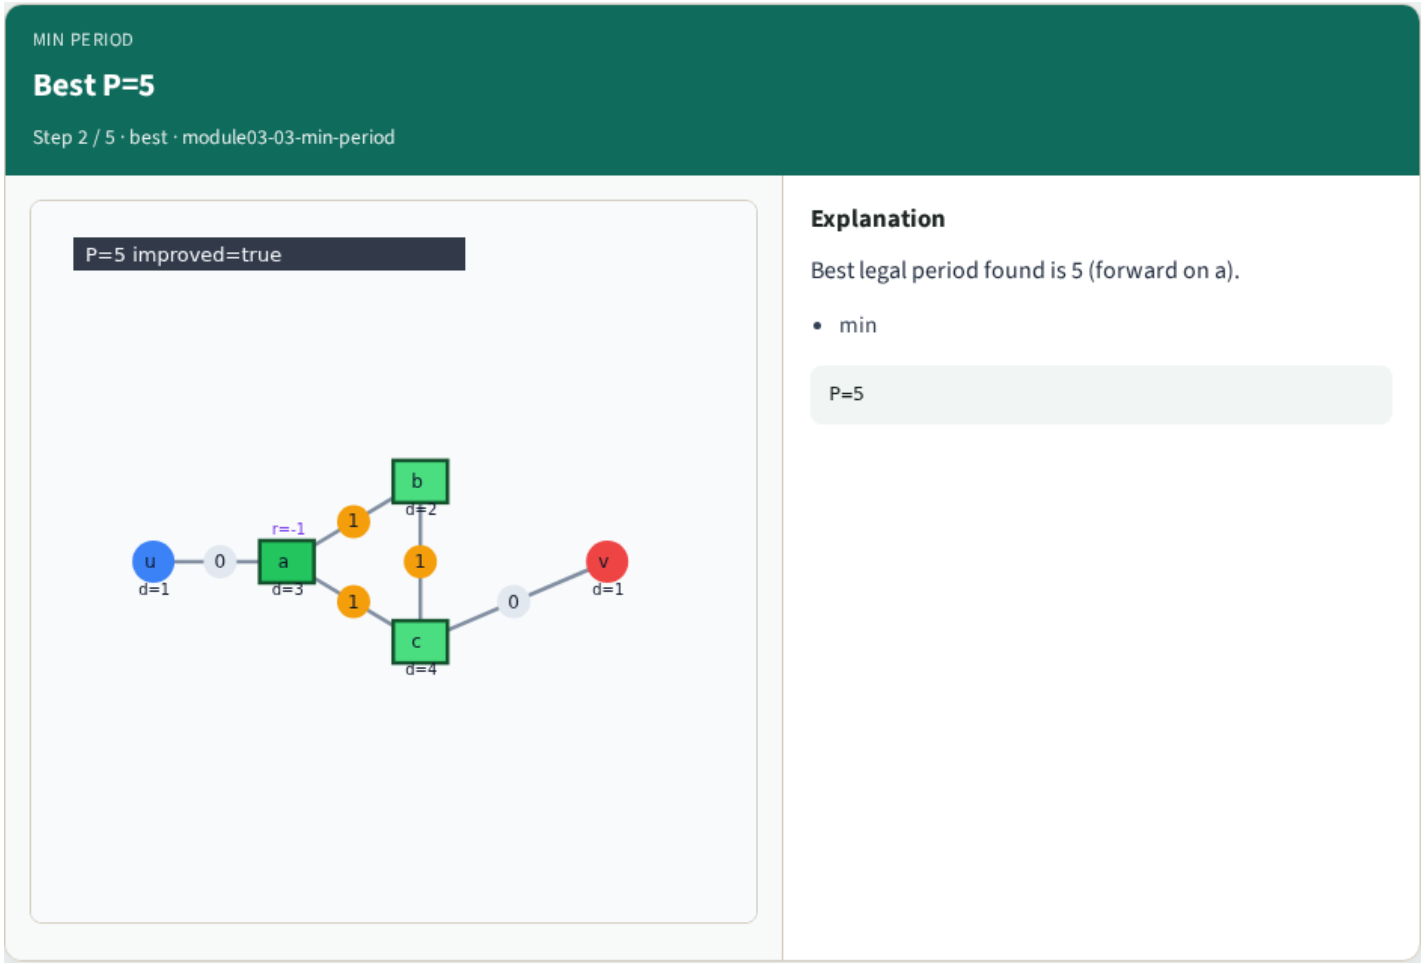

Lite search tries zero, forward a, backward c, forward b.

- enumerate

```
pick best
```

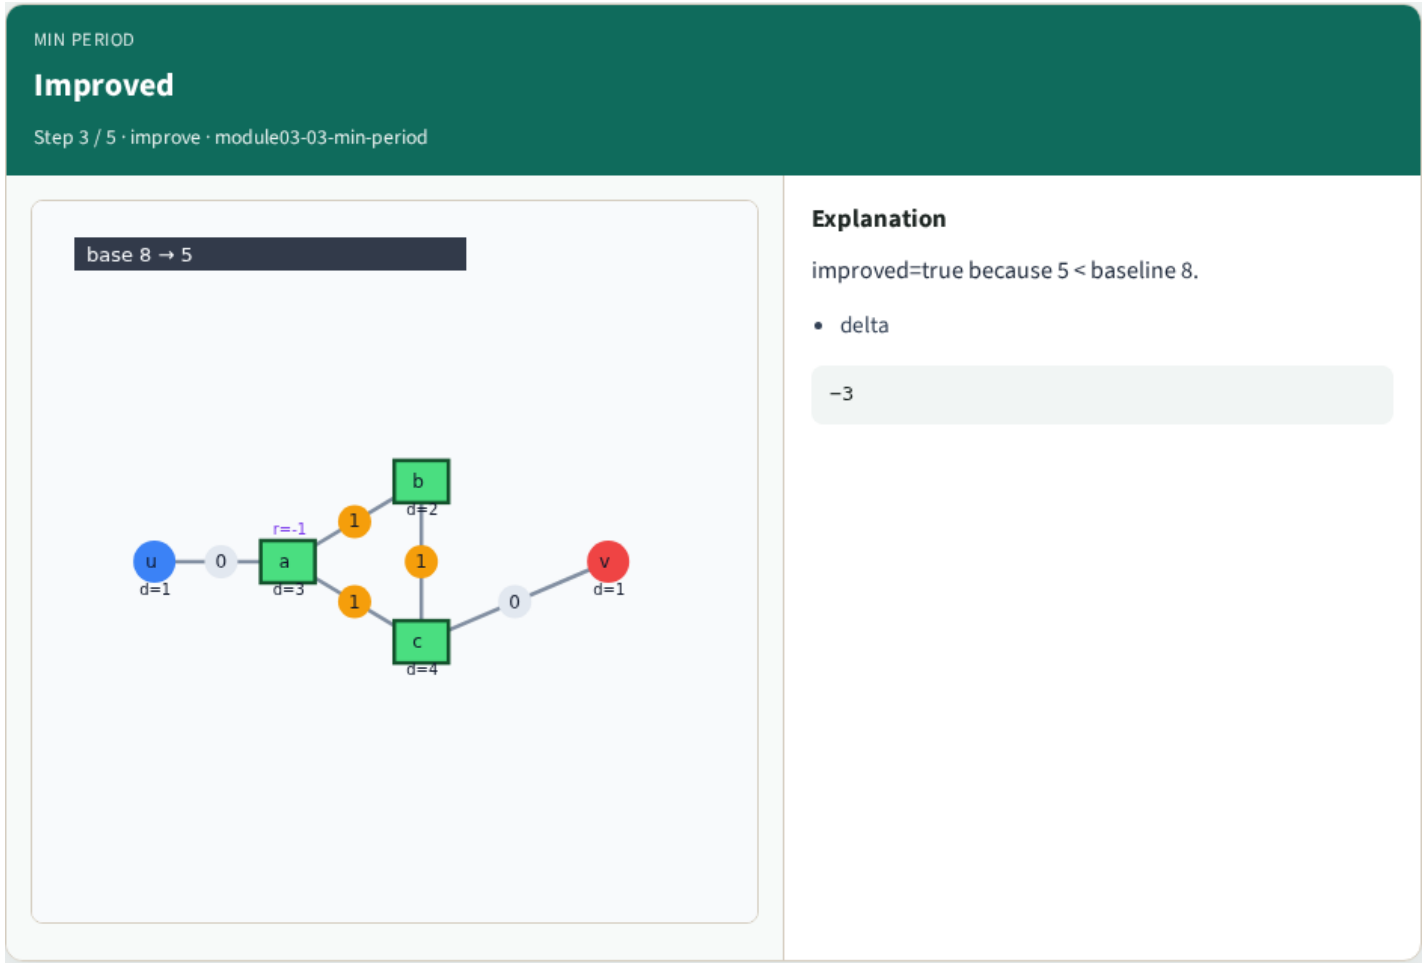

Try candidates

Best P=5

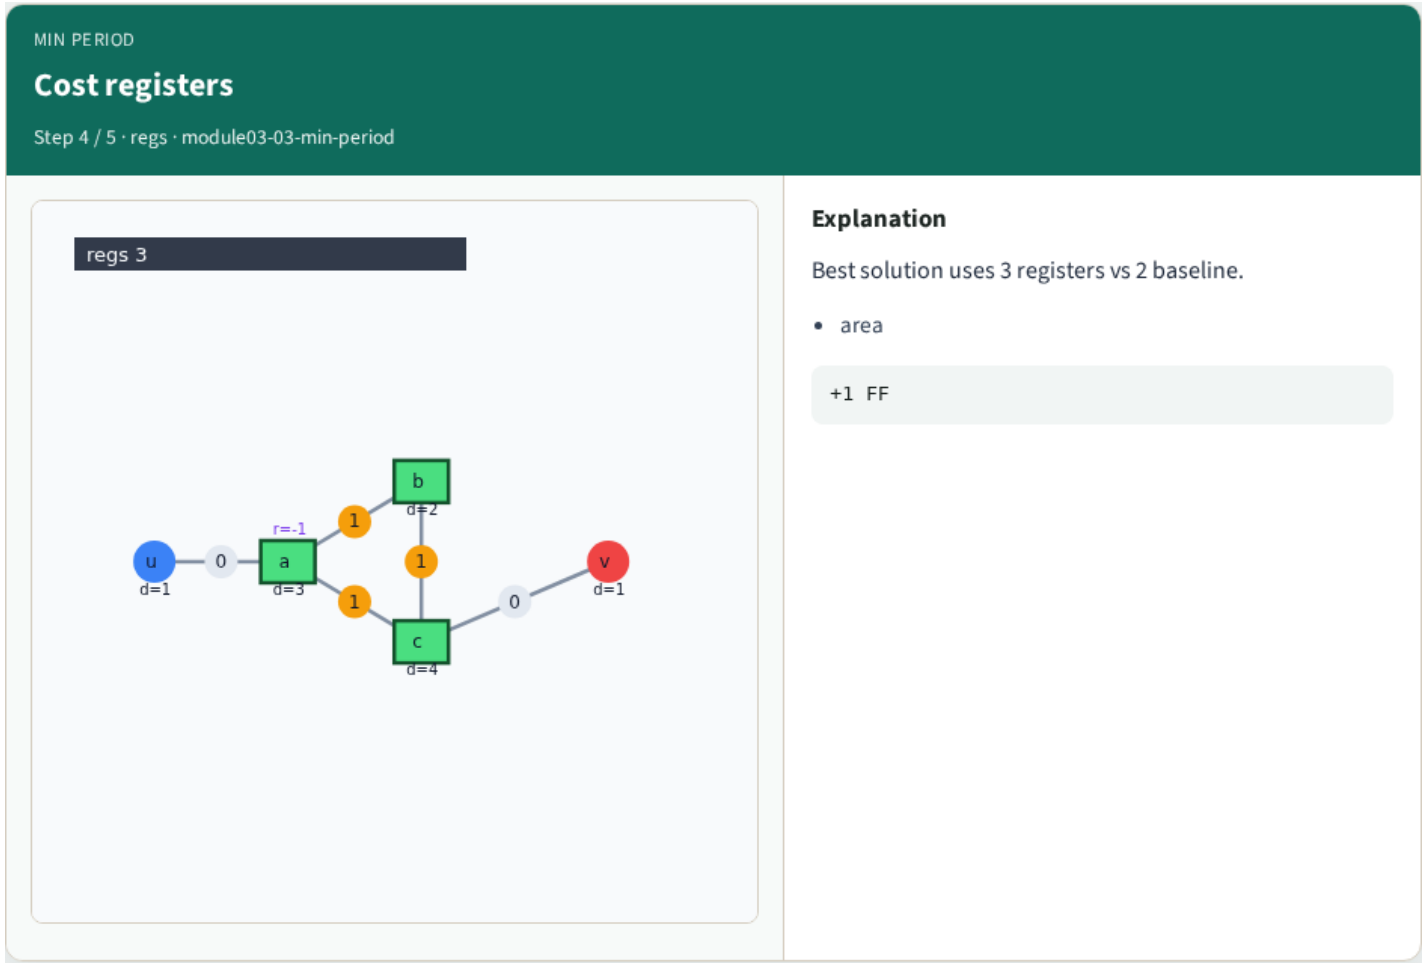

Best P=5

Sequential API

Browser lab track

Browser lab starter

Implement track

- Call min_period_binary_search(DATA); assert period==5 and legal

Pitfalls

- Assuming backward on c helps
- Expecting full LP optimality

Your turn

- Next: register/area tradeoff
