Sequential

Production flows chain heuristics; this lab is the toy pipeline

The idea

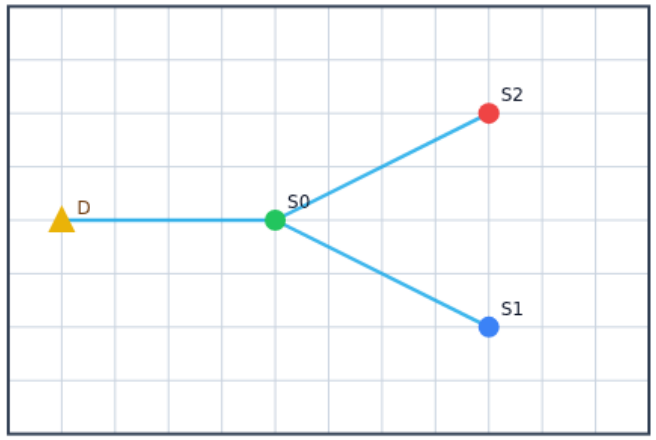

- Sequential_buffer builds sites, runs Van Ginneken, optionally adds fanout buffers

Pipeline

SEQUENTIAL BUFFER

Pipeline

Step 1 / 5 · pipe · module04-01-sequential-buffer

Explanation

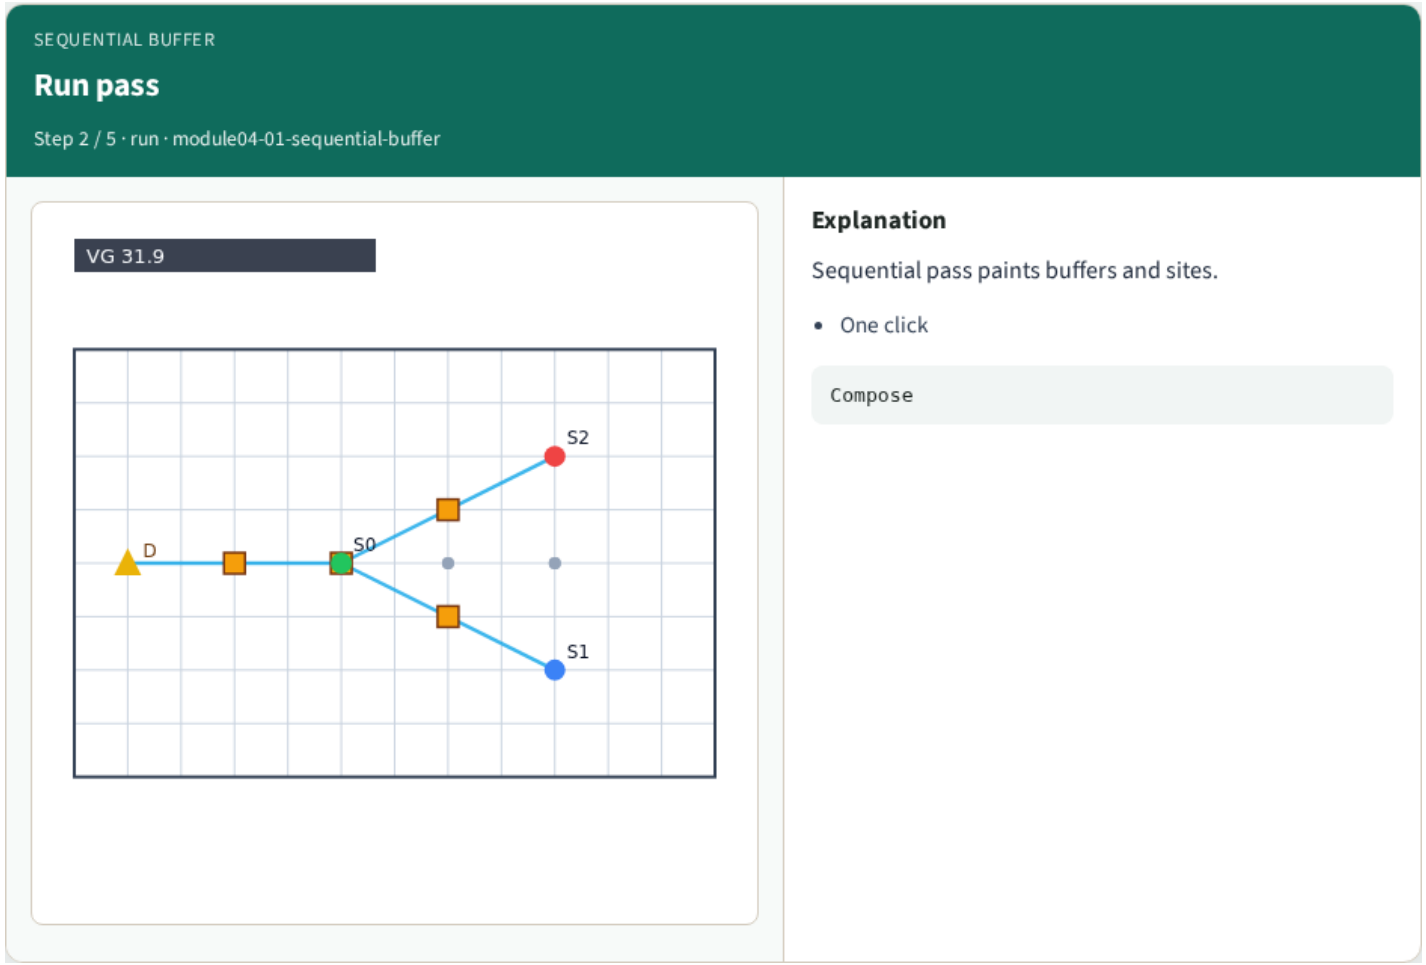

Sites → VG/slew → fanout compose.

- Full pass

```

Browser lab track

Browser lab starter

Implement track

- Call `sequential_buffer(data)`
- Assert sites and van_ginneken keys exist

Pitfalls

- Skipping prune
- Mixing modes without clearing buffers
- Ignoring fanout stage

Your turn

- Next: offline compare, then wrap
