Welcome

After pattern matching you still need a rule deck , width, spacing, enclosure, boolean, violations

The idea

- Toy tiny_drc: five shapes + eight rules → three geometry violations + one boolean hit

Two tracks

- Implement track uses common/ solvers; browser lab track uses platform tools

Toy layout

- Tiny_drc: shapes A,B,D on M1; C on M2; V on VIA; eight-rule deck

Path

- Deck → width → spacing → enclosure → markers → multi-layer → boolean → engine

Begin

- Next: rule deck load
