Welcome

After DRC you still need LVS , schematic graph, device recognition, net extract, binding, compare

The idea

- Toy tiny_lvs: INV schematic mn1/mp1 vs layout X0/X1 → four matched nets

Two tracks

- Implement track uses common/ solvers; browser lab track uses platform tools

Toy design

- Tiny_lvs: schematic mn1/mp1 INV; layout X0/X1; four bound nets

Path

- Schematic → recog → extract → layout → binding → match → compare → engine

Begin

- Next: schematic connectivity graph
