metal1

Golden

Golden

Browser lab track

- Open **magic-tech-vocab**
- Build the Magic recipe or open evidence stages, then Check

Implement track

- From common/, run real_solvers.py and confirm REAL_MAGIC_OK

Pitfalls

- Editing goldens by hand without re-running scripts
- Confusing Part A map JSON with checked-in logs

Try these

- From the common folder, run the real Magic self-test

Try these — try these

```
cd courses/learn_magic/common
python3 real_solvers.py
```

Pseudocode

- Here is the check in plain steps

Pseudocode — try these

```
Layers ndiff,pdiff,poly,metal1,nwell,contact; count=6.
ok if goldens match
```

Next

- Complete the quiz for this part
- Continue the Part B evidence track, then algorithms and internals
