Why Magic internals

Map Tile / Plane / CellDef to the Magic C tree

The idea

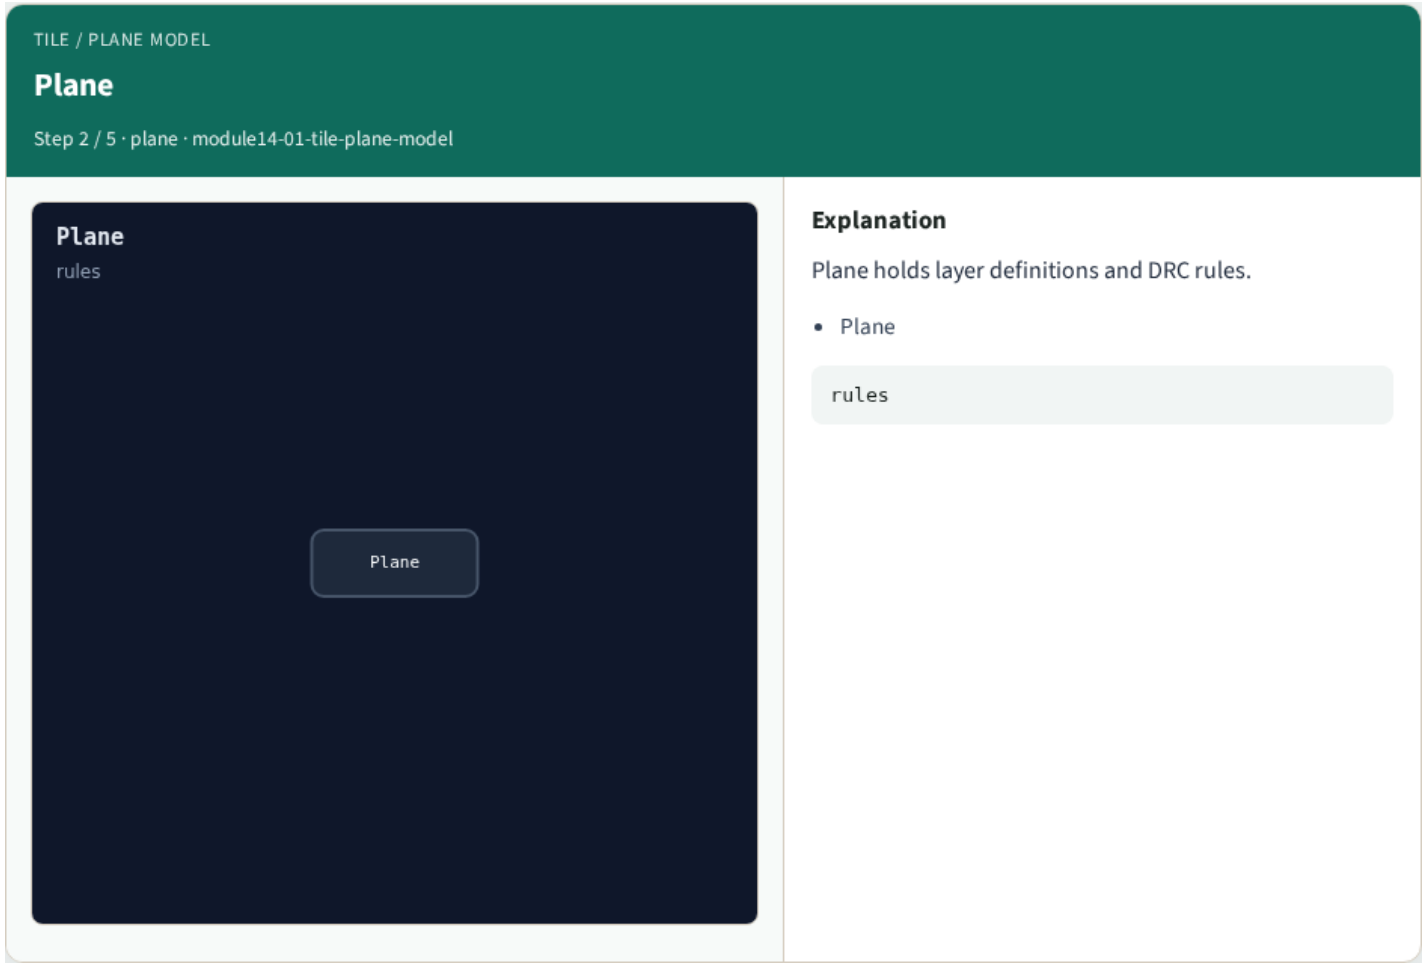

- GOLDEN: Name the three pillars and how Plane holds DRC rules

Tile

TILE / PLANE MODEL
Tile
Step 1 / 5 · tile · module14-01-tile-plane-model
Tile
geom
Tile
Explanation
Tile holds painted rectangles and labels.
Tile

Tile

Plane

TILE / PLANE MODEL
Plane
Step 2 / 5 · plane · module14-01-tile-plane-model
Plane
rules
Plane
Explanation
Plane holds layer definitions and DRC rules.
Plane
rules

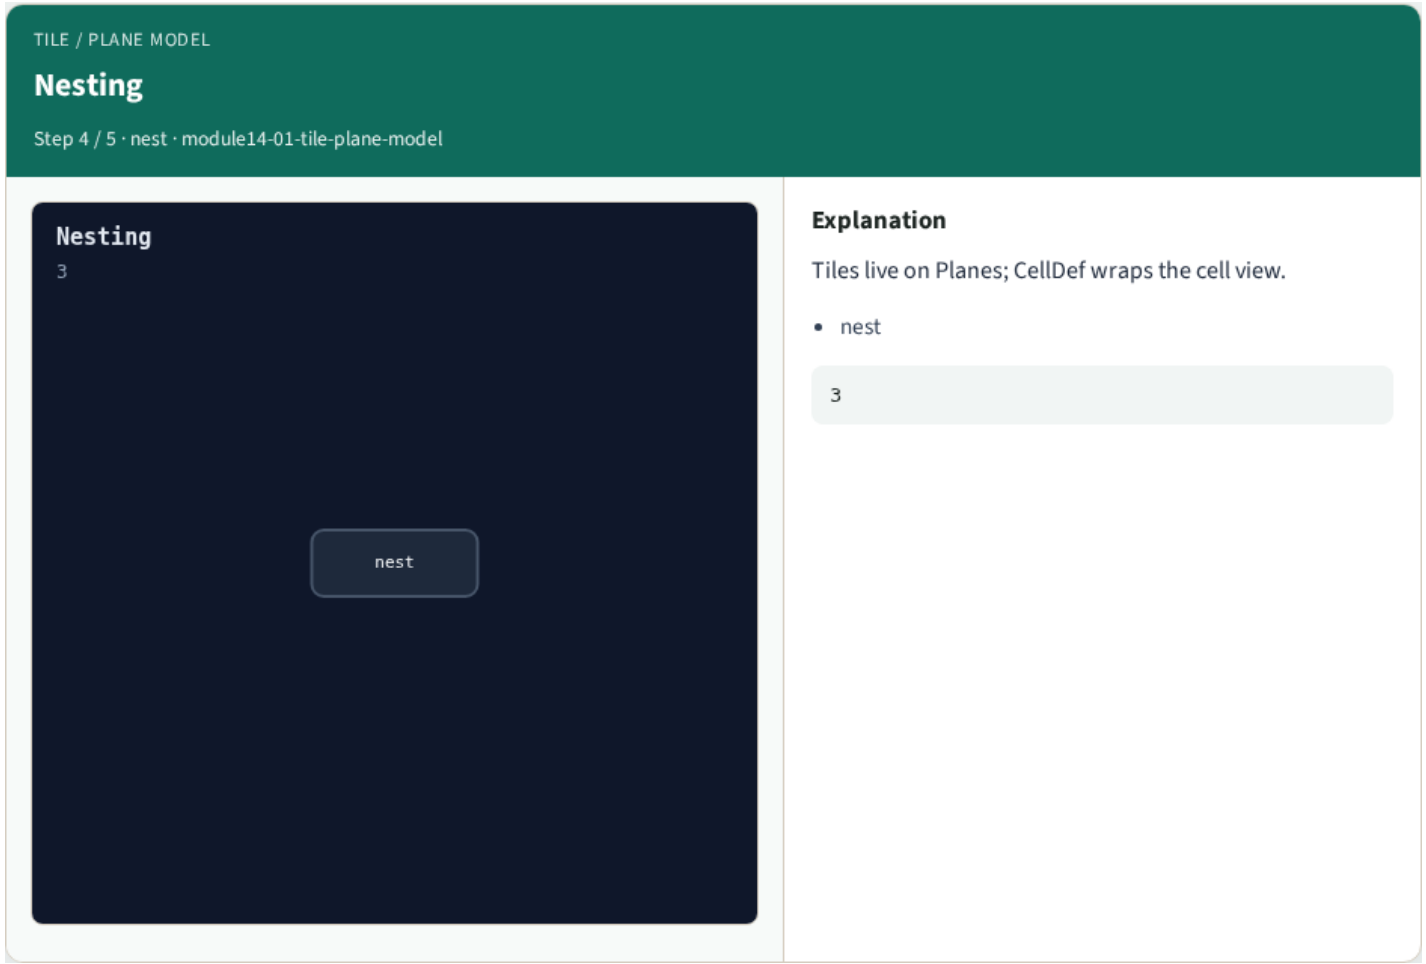

Plane

CellDef

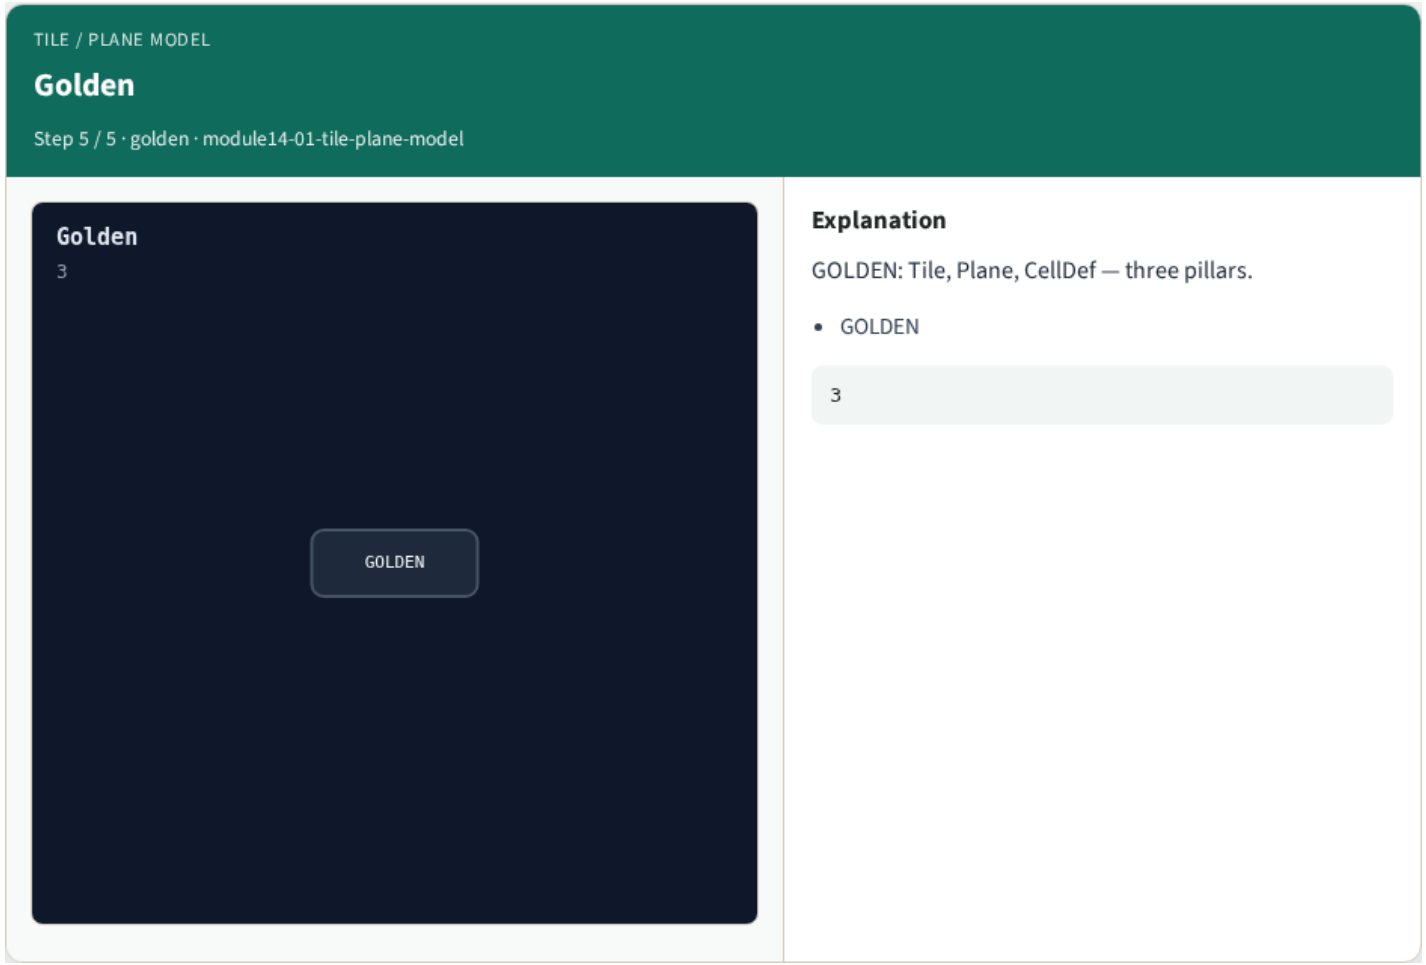

CellDef

Nesting

Nesting

Golden

Golden

Browser lab track

- Open **tile-plane-model**
- Click through stages and check goldens

Implement track

- Call tile_plane_model() in internals_solvers; assert golden match

Pitfalls

- Treating browser JSON as the C API
- Confusing Tile with OpenSTA Graph

Try these

- From the common folder, run the internals self-test

Try these — try these

```
cd courses/learn_magic/common
python3 internals_solvers.py
```

Pseudocode

- Here is the checklist in plain steps

Pseudocode — try these

```
Name the three pillars and how Plane holds DRC rules.
```

Next

- Complete the quiz for this part
- Wrap the Magic path , map, CLI evidence, algorithms, and C tree literacy
