Why Magic internals

Read the DRC scan → marker shape bound to Part B goldens

The idea

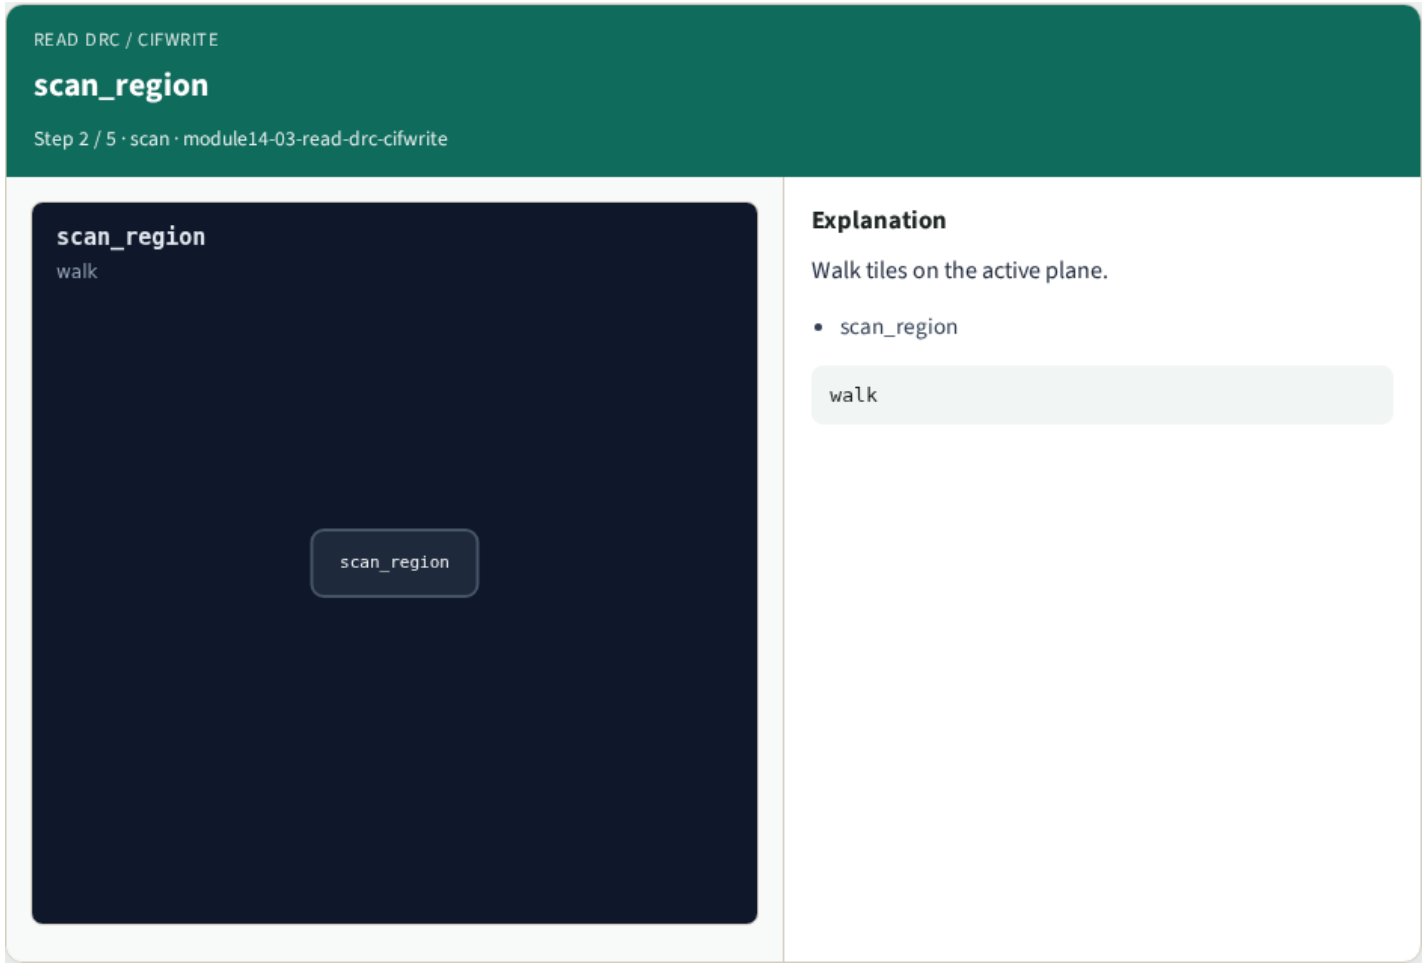

- GOLDEN: load_rules → scan_region → emit_marker (drc=1); cifwrite stages

load_rules

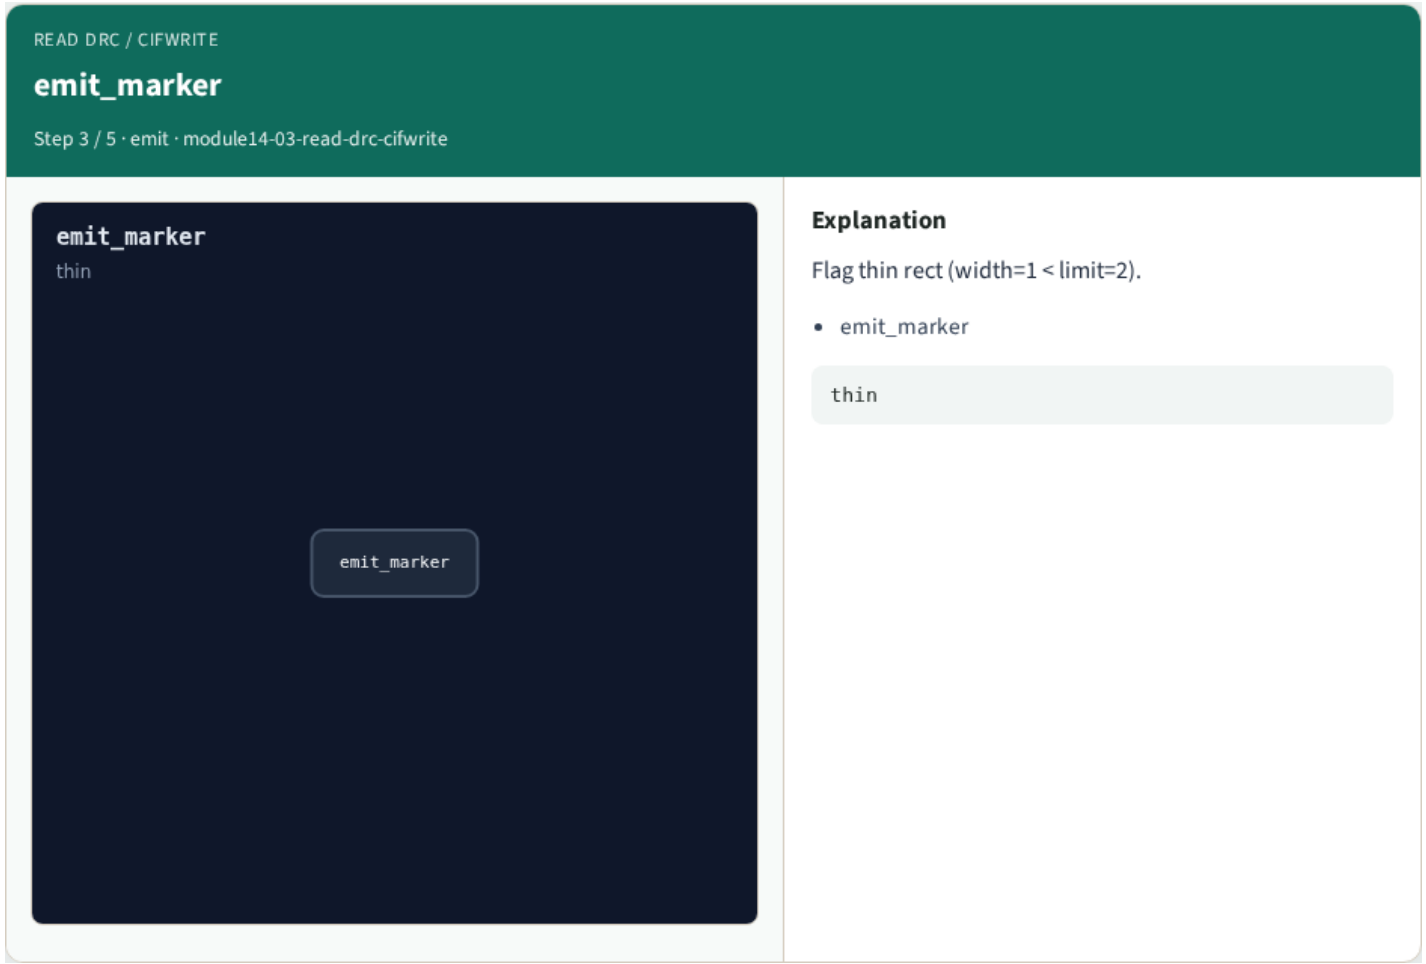

load_rules

scan_region

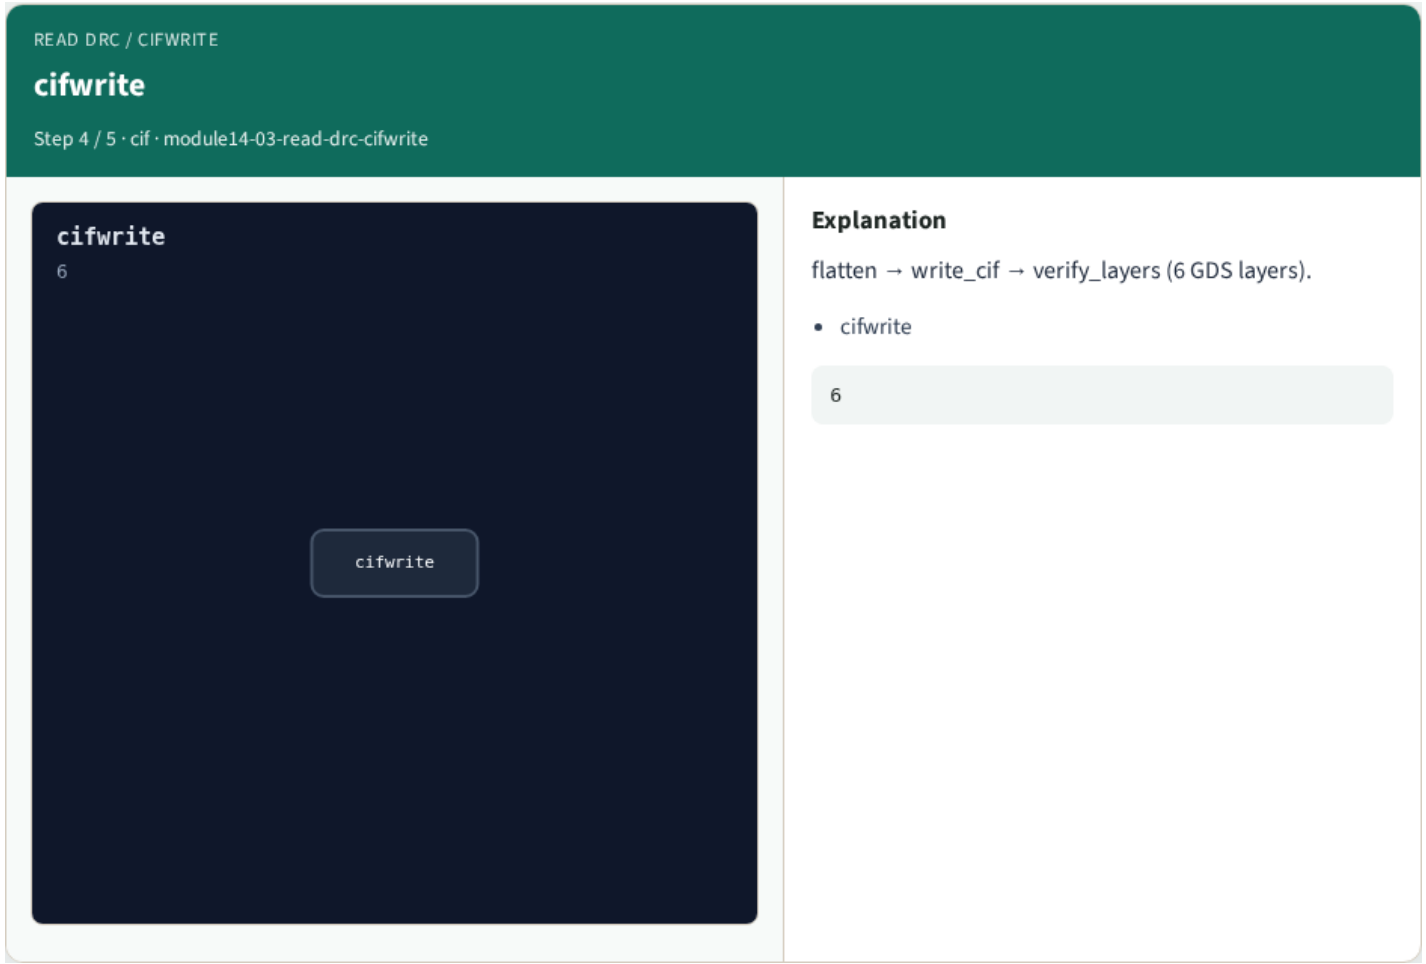

scan_region

emit_marker

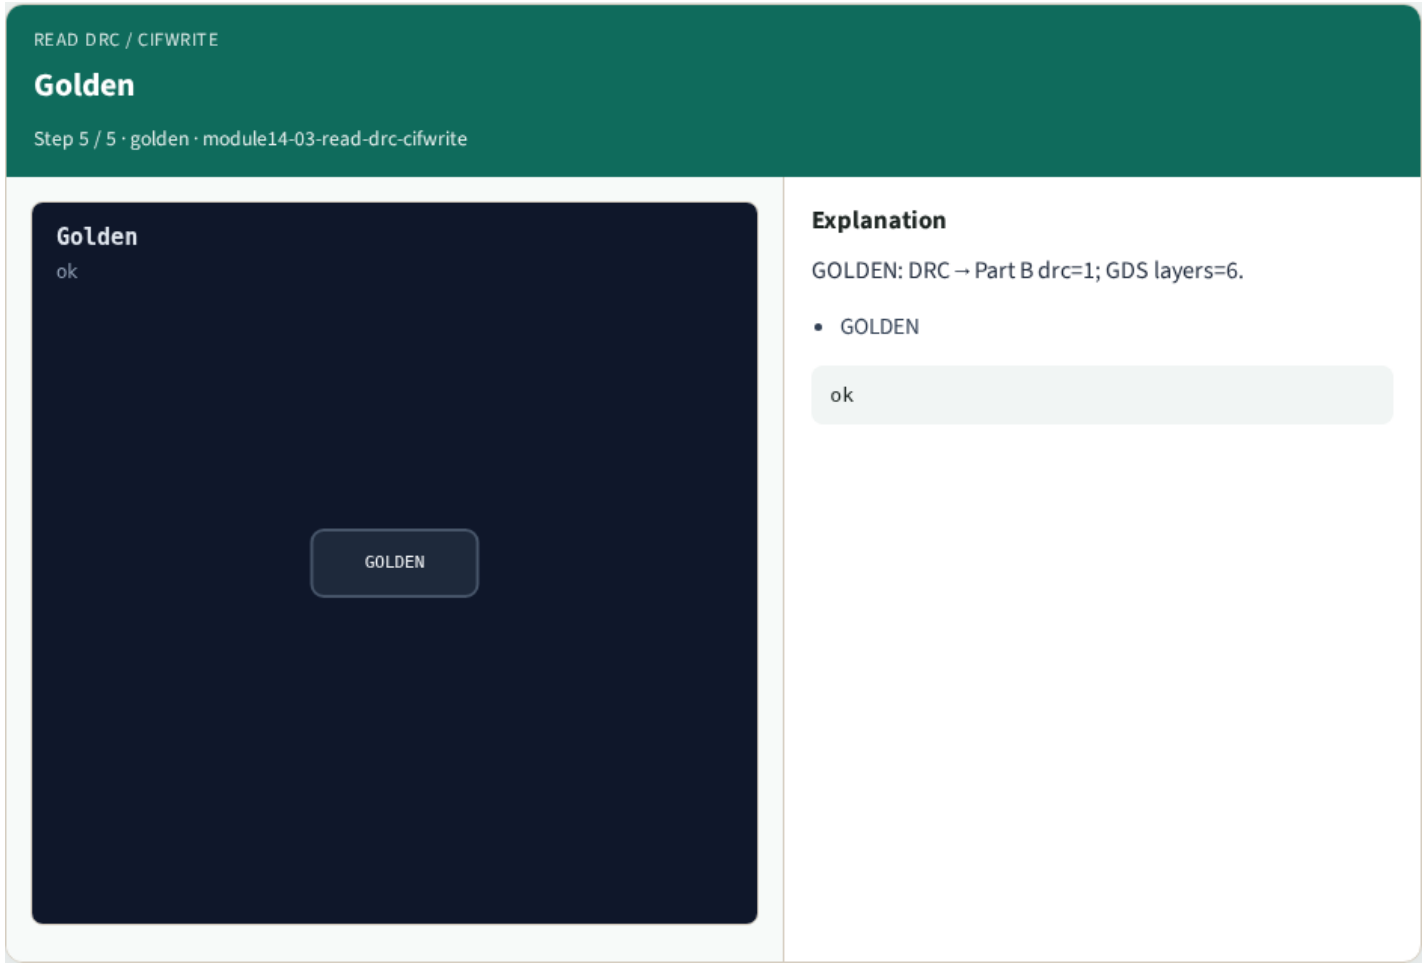

emit_marker

cifwrite

cifwrite

Golden

Golden

Browser lab track

- Open **read-drc-cifwrite**
- Click through stages and check goldens

Implement track

- Call read_drc_cifwrite() in internals_solvers; assert golden match

Pitfalls

- Treating browser JSON as the C API
- Confusing Tile with OpenSTA Graph

Try these

- From the common folder, run the internals self-test

Try these — try these

```
cd courses/learn_magic/common
python3 internals_solvers.py
```

Pseudocode

- Here is the checklist in plain steps

Pseudocode — try these

```
load_rules → scan_region → emit_marker (drc=1); cifwrite stages.
```
