Sequential CTS pass

Some flows grow the clock net in sink order, order changes skew

The idea

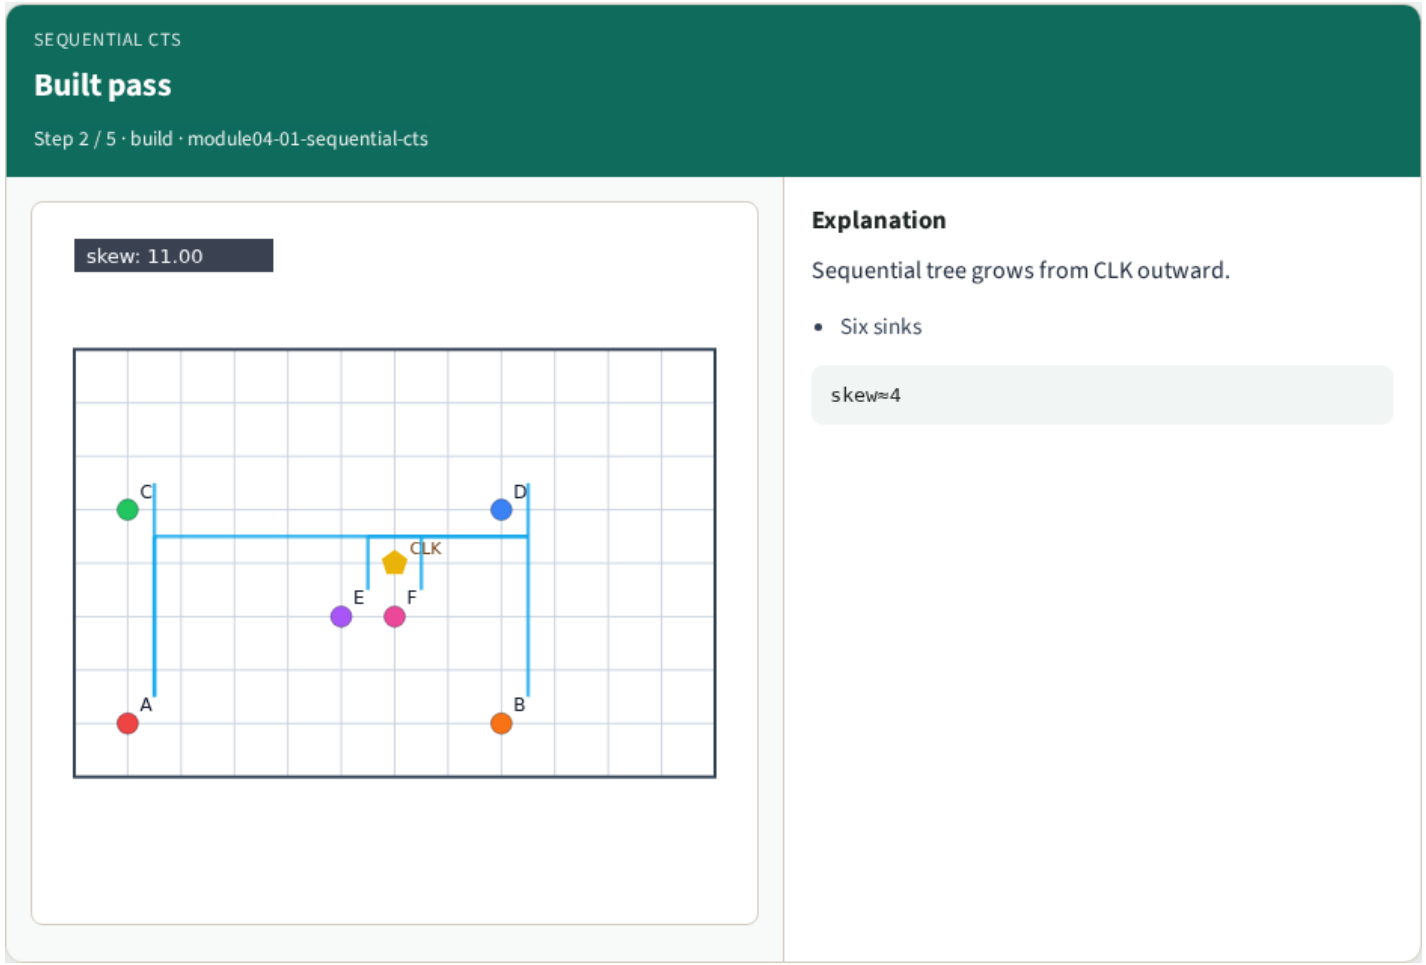

- Start from the source
- For each sink in order A…F, attach an L-route to the nearest existing tree node
- Optional buffering splits long legs afterward

Net order

Handoff

SEQUENTIAL CTS

Handoff

Step 5 / 5 · done · module04-01-sequential-cts

Explanation

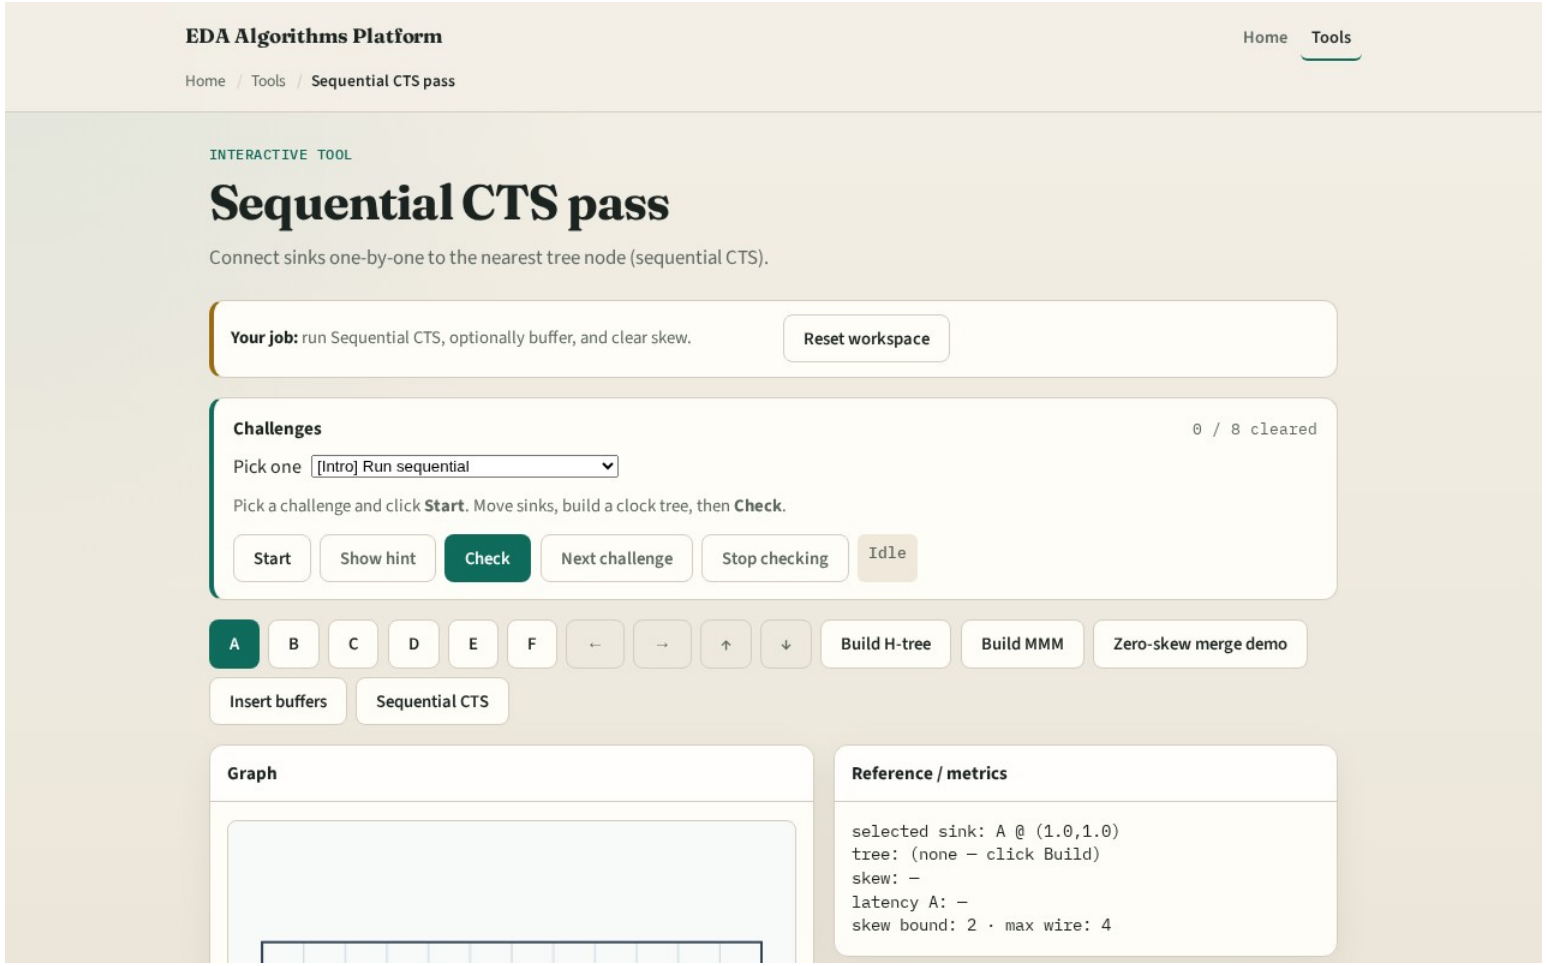

You can build H, MMM, DME-lite, sequential — next deepen buffering.

- learn_buffering

```
Course wrap
```

Handoff

Browser lab track

Browser lab starter

Implement track

- Call `sequential_cts(data
- Print skew

Pitfalls

- Assuming order does not matter
- Attaching to sinks only, not steiners
- Skipping the source as the first node

Your turn

- Next: offline benchmark compare, then wrap
