Hook

You built clock trees on the same chip spine as placement and routing

The idea

- Sinks, skew, H-tree, MMM, zero-skew merge, taps, buffering, bounds, sequential pass
- Natural next step is learn_buffering for Van Ginneken-style insertion

What you will do

- Recap sinks, skew, H/MMM/DME, buffers; choose learn_buffering next

Pitfalls

- Skipping goldens
- Mixing browser and offline without matching JSON

Your turn

- Complete the checklist

Next

- Complete the quiz for this part
- Continue the course
