Why OpenSTA

OpenLane and OpenROAD lean on OpenSTA for static timing

Four parts

- Part A is the interactive timing map
- Part B drives real OpenSTA with Tcl
- Part C binds algorithms to report goldens
- Part D orients you to the C++ tree

Prereq

- You should already know STA ideas from learn_sta , arrival, required, slack
- Here those ideas become OpenSTA commands and reports

Next

- Complete the quiz for this part
- Start with the timing graph map lab
