Welcome

After ERC you still need antenna rules , metal/gate ratio, charge, diodes, jumpers

The idea

- Toy tiny_antenna: n1 ratio 25, n3 diode, jumper breaks n1 → 1 marker

Two tracks

- Implement track uses common/ solvers; browser lab track uses platform tools

Toy layout

- Tiny_antenna: n1 ratio 25, n3 diode, jumper breaks n1 metal → 1 marker

Path

- Metal → gate → ratio → charge → threshold → diode → jumper → markers → engine

Begin

- Next: metal area per net
