Metal area

Antenna checks start by summing metal area on each net

The idea

- GOLDEN: metal_area n1=25

Sum metal

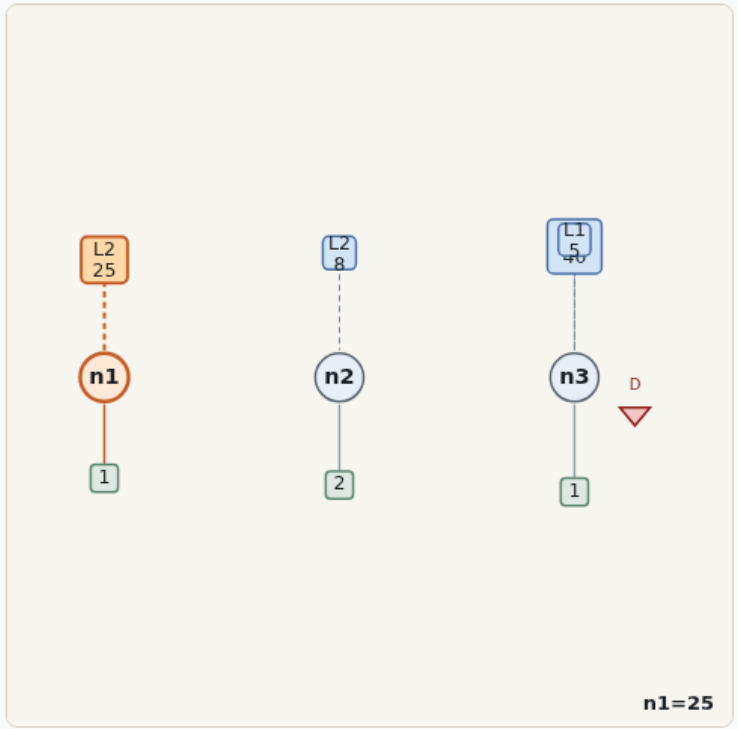

Sum metal

Net n1

METAL AREA PER NET

Net n1

Step 2 / 5 · n1 · module01-01-metal-area

Explanation

n1 has one layer-2 metal m1 area 25.

- n1

```
25
```

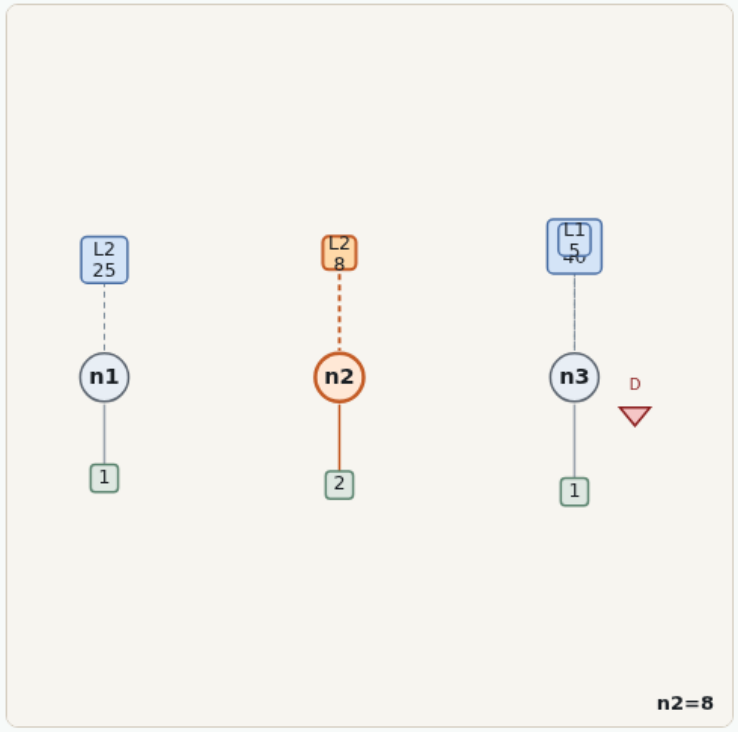

Net n1

Net n2

METAL AREA PER NET

Net n2

Step 3 / 5 · n2 · module01-01-metal-area

Explanation

n2 metal m2 area 8.

- n2

```
8
```

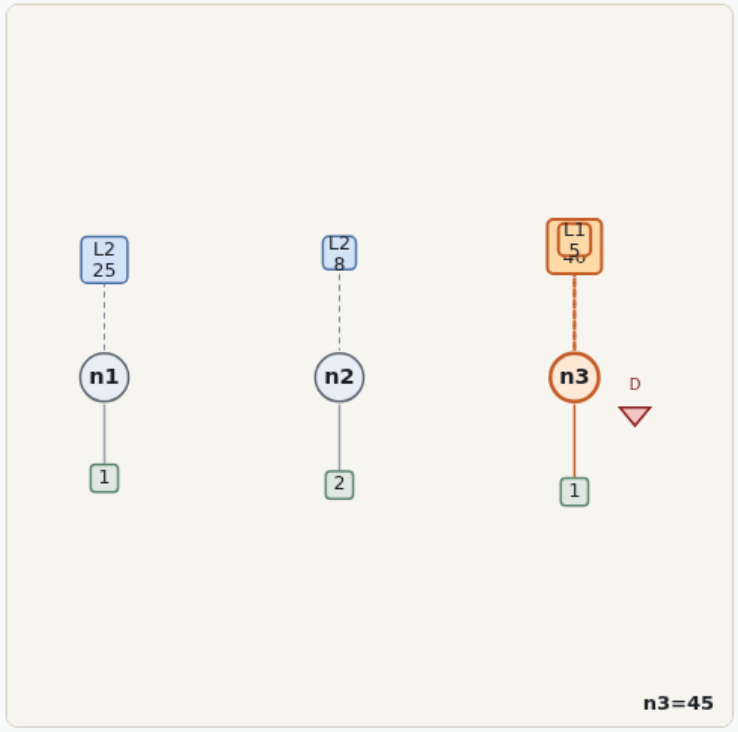

Net n2

Net n3

METAL AREA PER NET

Net n3

Step 4 / 5 · n3 · module01-01-metal-area

Explanation

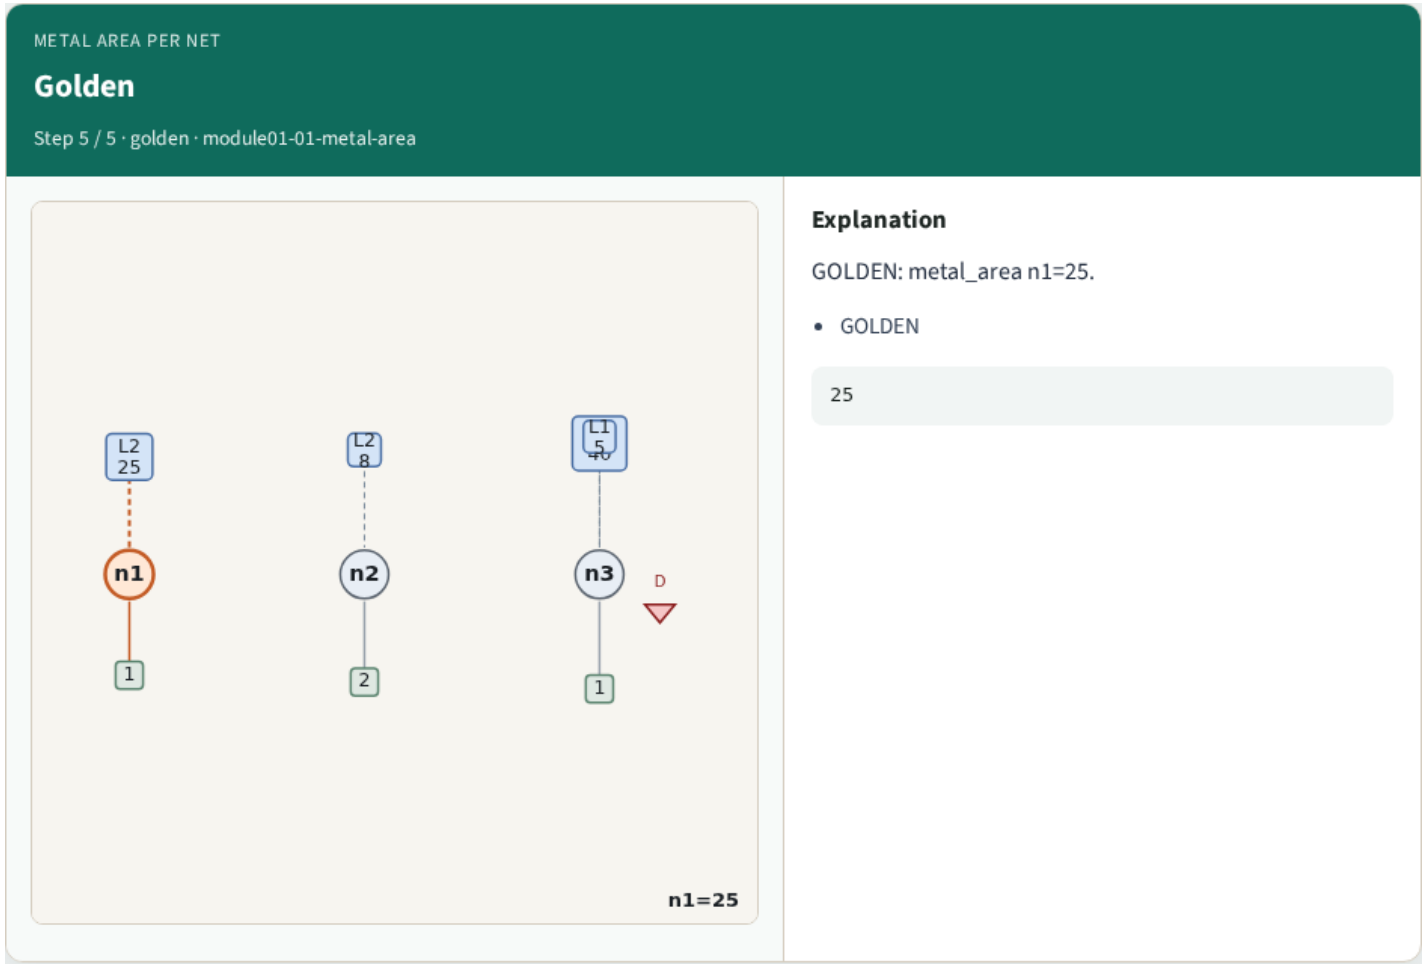

n3 metals m3+m3b sum to 45.

- n3

45

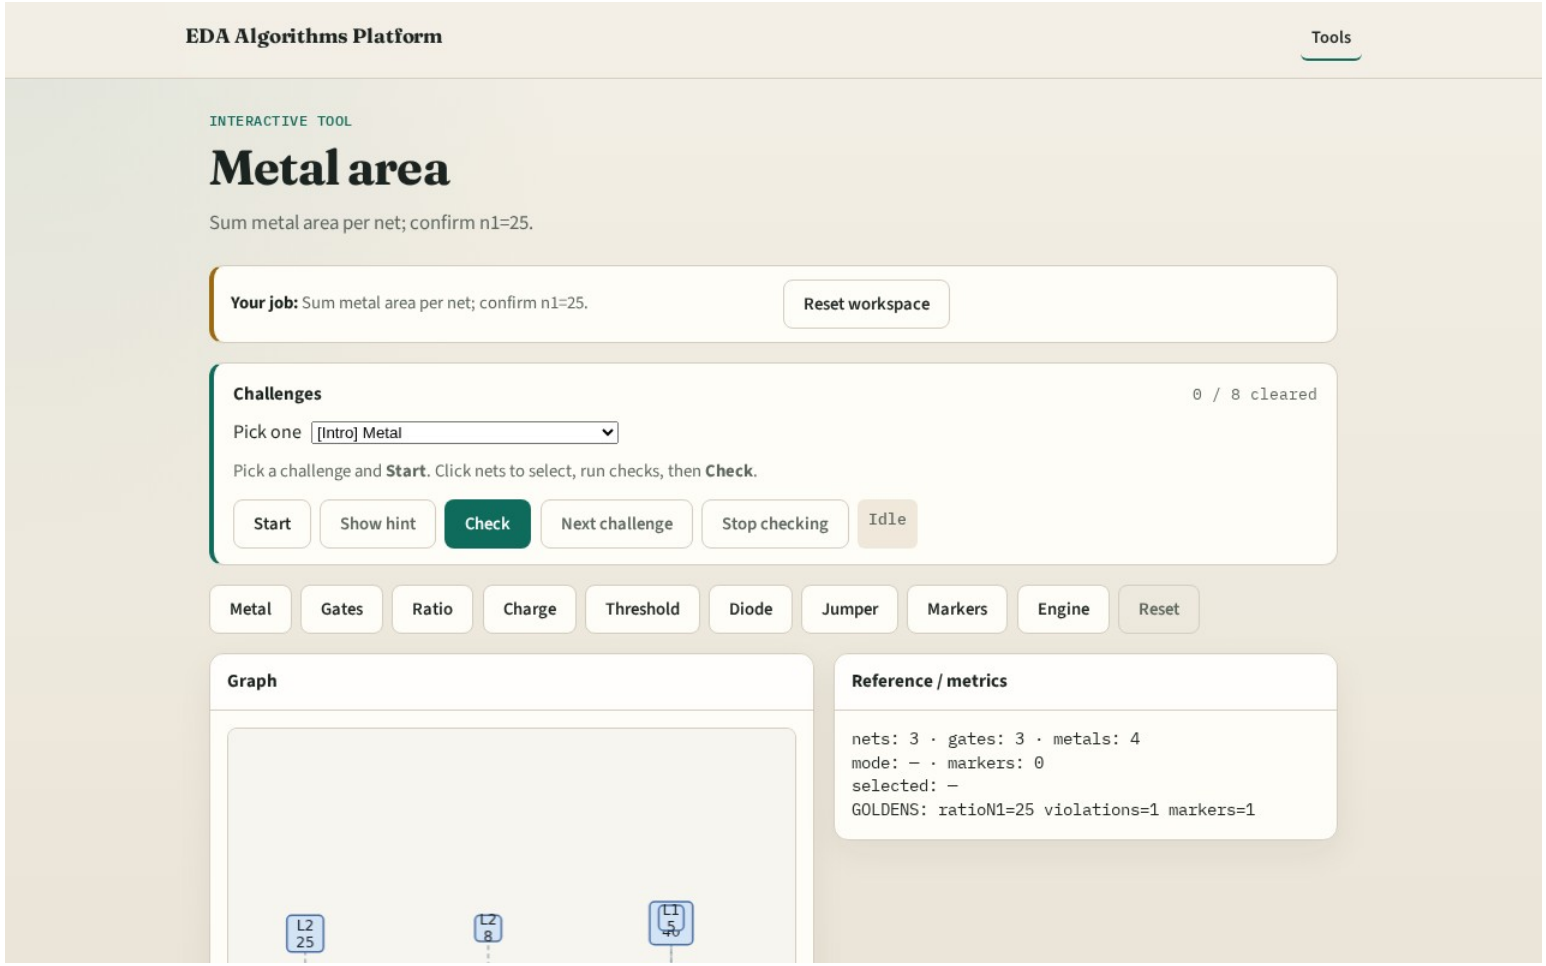

Net n3

Browser lab track

Browser lab starter

Implement track

- Call metal_area_by_net(); assert area['n1']==25

Pitfalls

- Double-counting after jumper cap
- Ignoring layer filter

Your turn

- Next: gate area per net
