Why offline compare

Print pass-map and real Yosys compare metrics without the browser

Pass-map compare

- Run the pass-map compare helper from the common folder

Pass-map compare — try these

```
cd courses/learn_yosys/common
python3 -c "from solvers import yosys_compare;
print(yosys_compare())"
```

Real compare

- Run the real evidence compare helper

Real compare — try these

```
cd courses/learn_yosys/common
python3 -c "from real_solvers import real_yosys_compare;
print(real_yosys_compare())"
```

Browser lab track

- Open offline-benchmark-compare if you prefer the browser view of the same metrics

Implement track

- Confirm both compare helpers print ok goldens from the common folder

Pitfalls

- Comparing only one track
- Ignoring checked-in goldens when Yosys is missing

Next

- Complete the quiz for this part
- Continue into the real CLI modules, then Part C algorithms
