Why aigmap

Aigmap pushes toward AND/NOT form; synth -top runs Yosys's generic recipe to gate-level cells

The idea

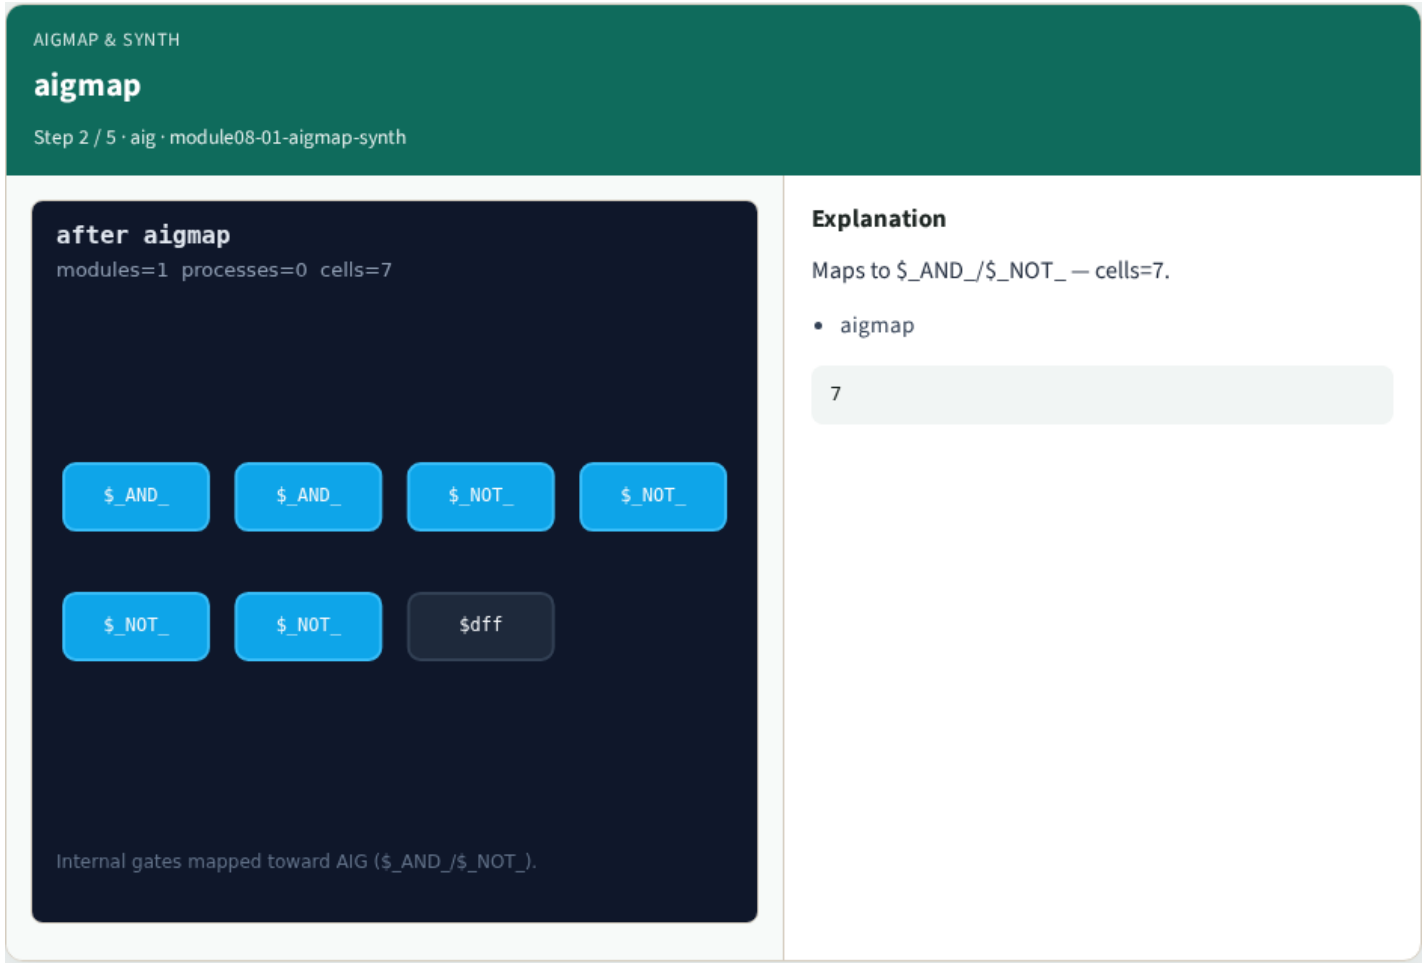

- GOLDEN: aigmap cells=7; synth cells=2 types=$_AOI3_,$_DFF_P_

Before aigmap

AOI3 + DFF

AOI3 + DFF

Golden

Golden

Browser lab track

- Open **aigmap-synth**
- Open **aigmap-synth**
- Show aigmap then synth; select $_AOI3_

Implement track

- Call pass_aigmap_synth(); assert ok

Pitfalls

- Expecting NAND2 from the toy techmap
- Skipping synth -top

Try these

- From the common folder

Try these — try these

```
cd courses/learn_yosys/common
python3 real_solvers.py
```

Pseudocode

- Here is the check in plain steps

Pseudocode — try these

```
aigmap then synth
assert cells seven then two AOI and DFF
```
