Why real

The evidence engine checks CLI order, RTLIL goldens, proc/flatten/opt, and synth outputs together

The idea

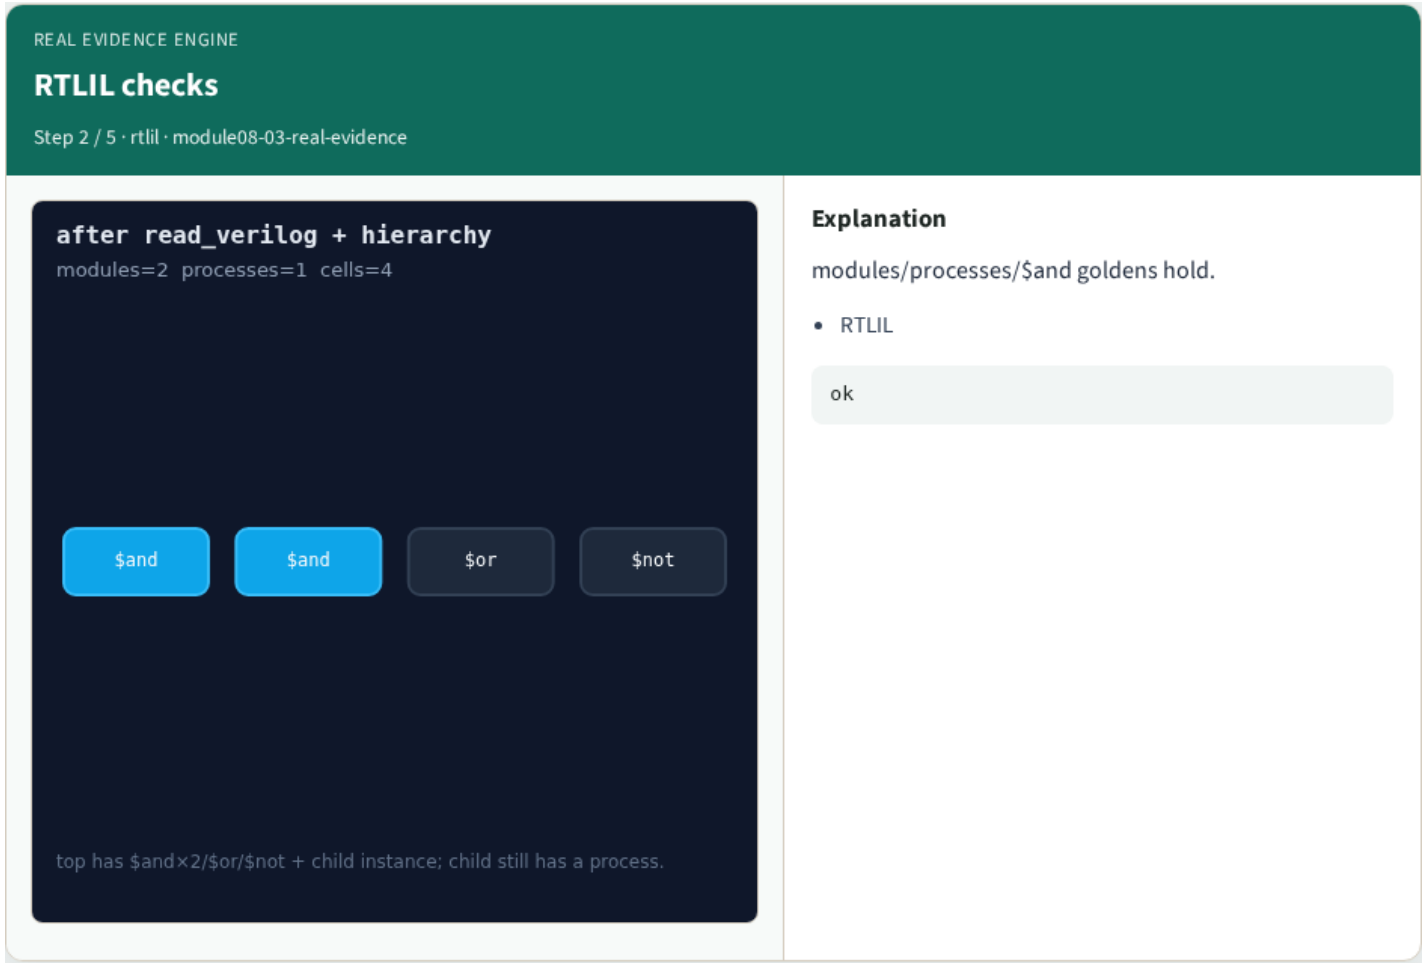

- GOLDEN: engine ok=True; after_synth_cells=2

Full recipe

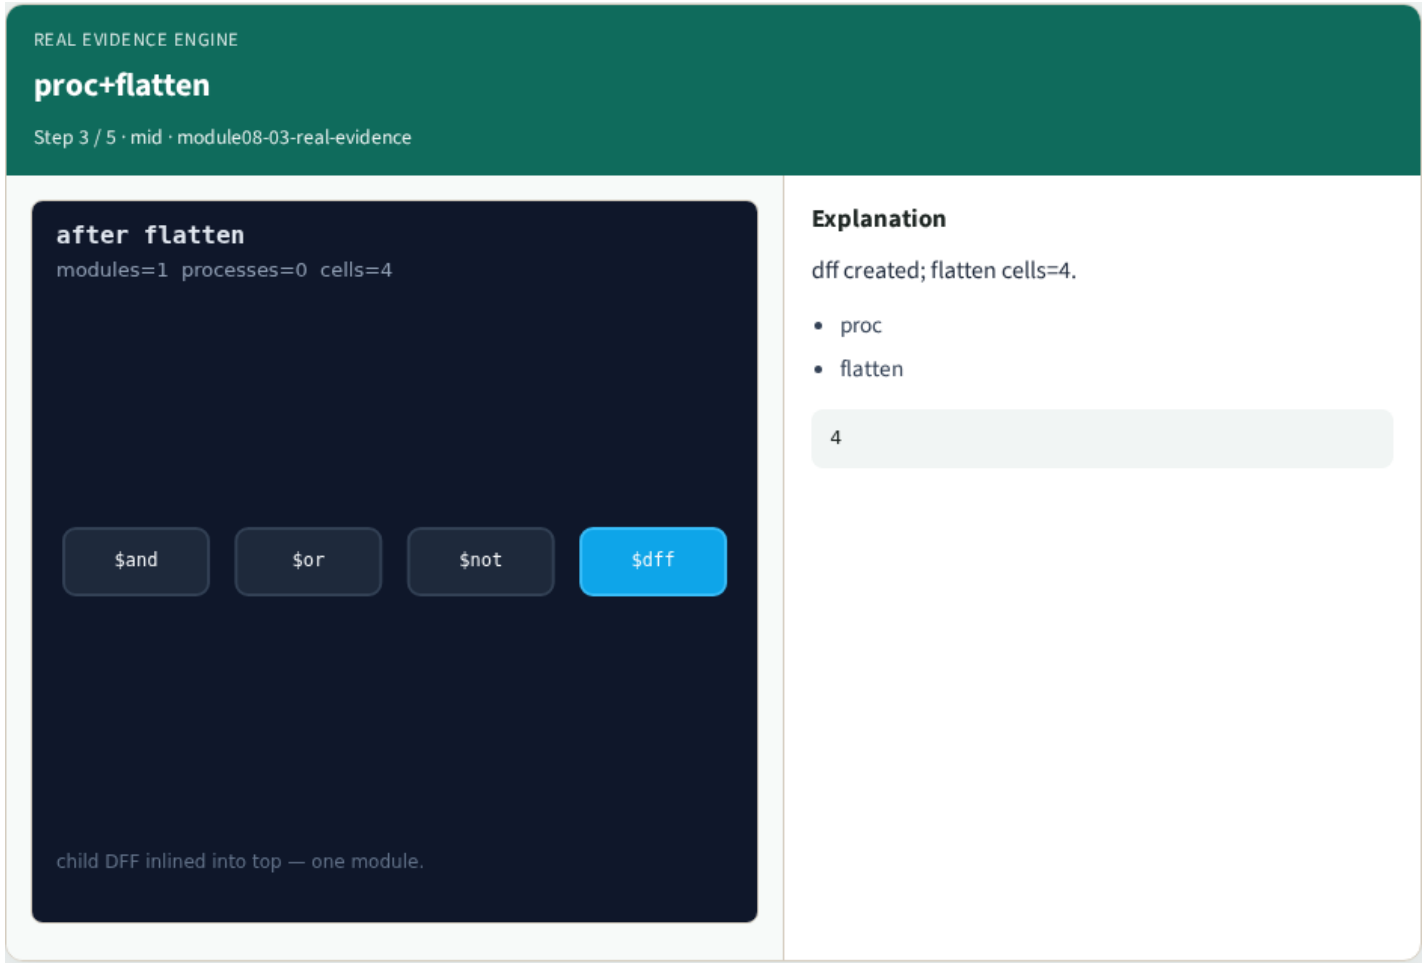

Full recipe

RTLIL checks

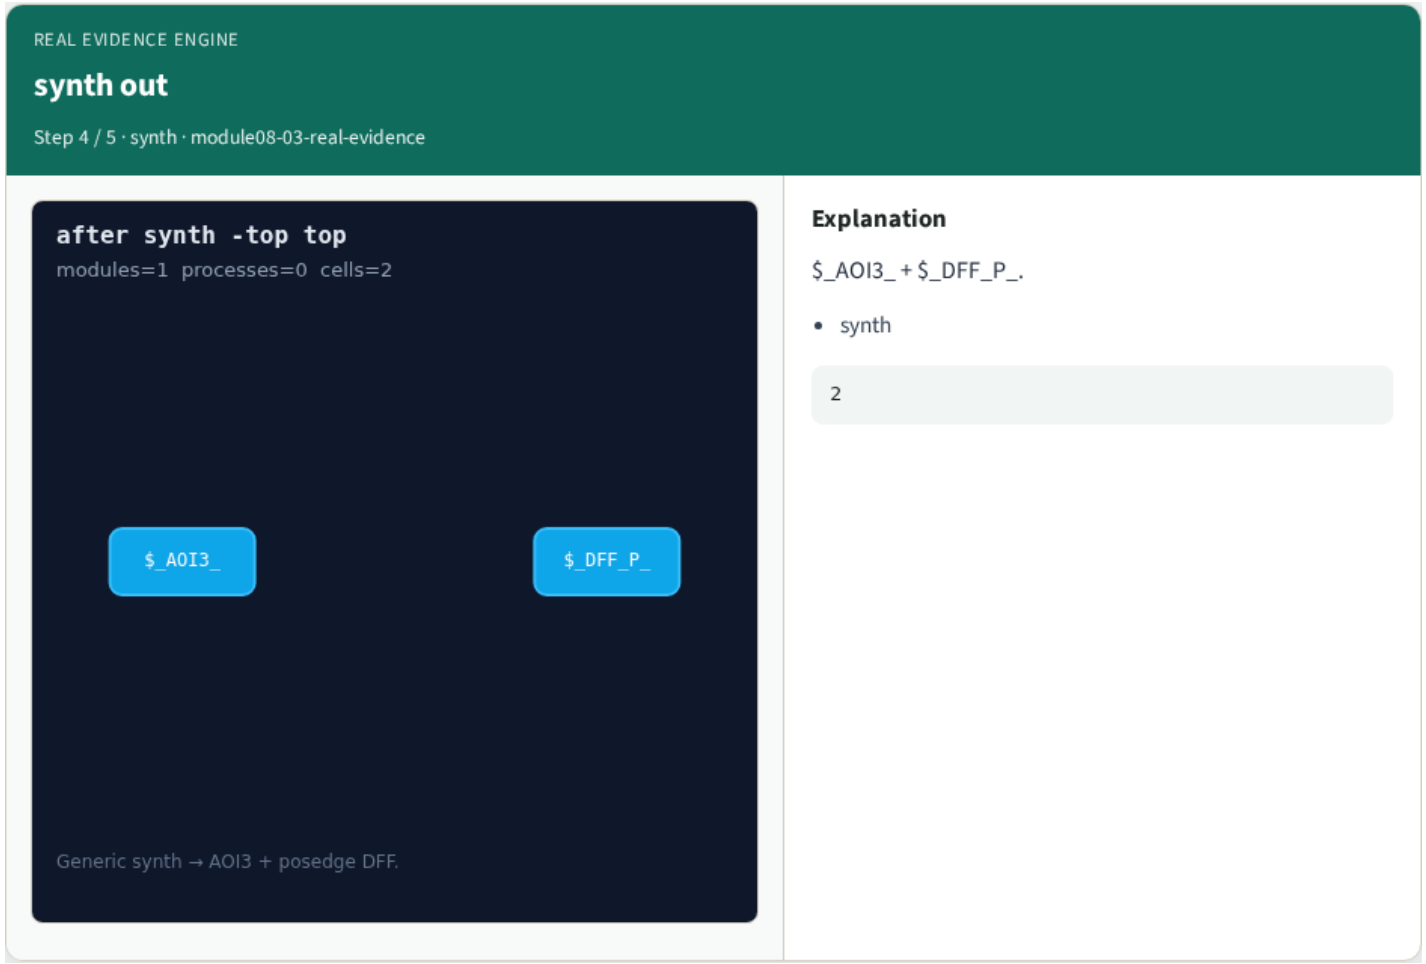

RTLIL checks

proc+flatten

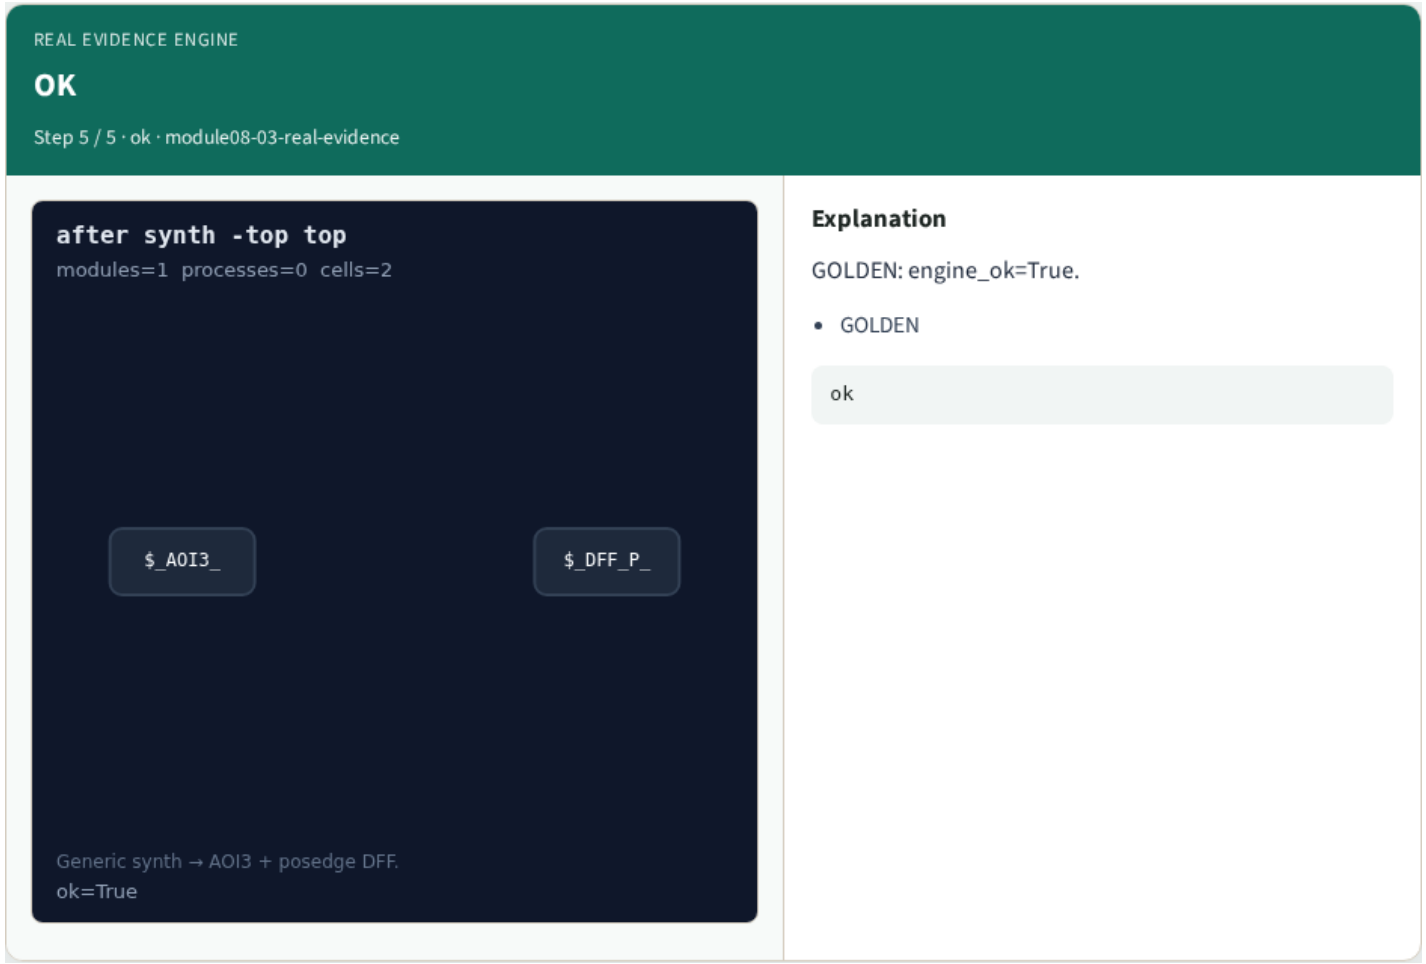

proc+flatten

synth out

synth out

OK

REAL EVIDENCE ENGINE
OK
Step 5 / 5 · ok · module08-03-real-evidence
after synth -top top
modules=1 processes=0 cells=2
$_AOI3_
$_DFF_P_
Generic synth → AOI3 + posedge DFF.
ok=True
Explanation
GOLDEN: engine_ok=True.
GOLDEN
ok

OK

Browser lab track

- Open **real-evidence**
- Open **real-evidence**
- Build golden recipe; run Engine; confirm ok

Implement track

- Call real_yosys_engine(); assert ok

Pitfalls

- Stopping at toy yosys_engine
- Wrong recipe order

Try these

- From the common folder

Try these — try these

```
cd courses/learn_yosys/common
python3 real_solvers.py
```

Pseudocode

- Here is the check in plain steps

Pseudocode — try these

```
run full golden recipe
assert engine ok and synth cells two
```
