Welcome

Physical verification starts by matching geometry patterns , edge pairs, regions, markers , before full DRC decks

The idea

- This course uses tiny_patterns: M1 shapes A,B,D, M2 shape C, via V
- Goldens: width on D, space A–B, enclosure fail V vs M2 → 3 markers

Two tracks

- Implement track uses common/ solvers; browser lab track uses platform tools

Toy layout

- Five shapes on M1, M2, and VIA; three engine markers on the golden

Path

- Edge-pair space, width region, scanline, markers, via, interactions, boolean, engine

Begin

- Next: edges and polygons
